Ford Granada

The 1977 Granada has added styling flair to the sports coupe option on its base two-door models. A new seat trim and sports steering wheel are included with the outside dual color-keyed mirrors, style steel wheels with gold accents and trim rings, and the gold hood, bodyside and decklid paint stripes.

Automotive electronics doing more than ever

Electronics are increasingly taking over the operation of the automobile, the Automotive Informative Council reports

There is plenty of evidence in current model vehicles like the electronic ignition system, computerized braking for heavy-duty trucks, constant temperature of interior air flow, digital clocks, and—more recently—precise control of the firing of spark plugs

That system that monitors the plugs is a development of Chrysler Corp Called "lean burn," it permits a leaner fuel-air mixture that uses less gasoline and reduces emissions to a point where the catalytic converter is not needed under 1976 emission standards

GENERAL MOTORS has announced an electronic system that automatically adjusts timing for optimum fuel economy, driveability and emission control Called MISAR (Microprocessed Sensing and Automatic Regulation), it makes its debut on the 1977 Olds Toronado

Upcoming from Chrysler is electronic fuel metering, a sophisticated feeding of gasoline to the engine through the carburetor. The goal of electronic fuel metering is better fuel economy Ford Motor also is working on carburetor variation to produce more miles to the gallon.

WHAT WE HAVE at this point in automotive electronics history is impressive, but the future promises a whole lot more. Some of it is just around the corner

One example is a mileage meter on the instrument panel that will tell the driver just how many miles to the gallon his engine is delivering. It even has a memory feature that retains the m.p.g. information and can produce it for comparison with a later mileage test on the car.

Perhaps, further down the road, electronics will take over the operation of the automatic transmission. Under computerized control of the shifting of gears, the driver won't notice any change or surge in power as the transmission moves into a higher gear. Just as important, the electronic transmission will reduce gas consumption

And the day will come when digital callouts on the instrument panel will transmit information on virtually every working part of an automobile. By pressing a button and getting a readout, the driver of the future will be able to check on the oil pressure, the carburetor and even the water pump
