Last Sunday was Home Department Day in our school and we listened to a very interesting talk by Miss Mary Foster. A Bible drill in which all the classes took part was staged by our superintendent, Mr. Whitt. Special music was furnished by a quartet consisting of Cedric and King Harger Mr. Barrons and Mr. Applin.

We have as yet, failed to obtain our goal of 150 before Easter, so why not come out next Sunday and help us make it.

SECRET OF OAKLAND'S POWER IN NEW HEAD

The new two-plane cylinder head, designed exclusively for the V-type engine of the Oakland Eight, is proving one of the most successful motor designs of the current year. To this radical new cylinder head is given major credit for the ease and smoothness with which the Oakland Eight develops 85 horsepower from an engine of only 251 cubic inches displacement.

Instead of forming a flat covering over the engine cylinders, the two-plane head is shaped like a broad wedge with the face forming an angle of 135 degrees. When the head bolts are tightened, the Oakland cylinder head is literally wedged into the angle of the engine block, developing a tremendous wedge pressure which compresses the head gaskets until they become entirely leak proof. This renders practicable the use of the high compression ratio of five to one. That is, the explosive mixture at the top of the compression stroke has been packed into only one-fifth the space that it occupied upon first entering the cylinder. The more tightly a gasoline charge is compressed, the higher is the resulting output of power.

A Spanish woman, Milagro Forcadell Cadenas, is dead at Santiago, Chile, at the age of 139 years. The municipal records show she was married to a Chilean 119 years ago.
