Finger painting is a "fun" activity for a rainy day. Home economists note children enjoy painting on oil cloth squares which are tacked to a table or board. After the oil cloth is used, it can be sponged off and saved for the next painting session. Non-absorbent, glossy paper, such as shelf paper, is fine for finger painting, and these pictures can be saved.

Automobiles are not equipped with crystal balls. That is why it is necessary to think and look ahead as you are driving. A week ago Monday a water main burst just outside of the pump house. Luckily it happened late at night so that most of our residents did not realize that the water was turned off for about six hours. As it happened Harry and Reta Mesevery who live directly across from the pump house heard the sound of rushing water about 11:15 p.m.

Jack Gazvoda, chairman of maintainence committee, spent almost an hour trying to reach the Oakland County Department of Public Works emergency crew. The workman arrived about one in the morning and worked until about seven repairing the damage. The water was turned back on before most of us got up to start the day.

WELL LADIES, is there an unnatural QT around your house? After a noisy, busy summer Old Homestead's one hundred school age children started the fall semester today. Smaller Eggs Are Good Buy

Small and medium size eggs are increasing in supply. No matter what you think of the size, you'll find that small eggs are usually very high in quality — which means they are fresh, tender and sweet in flavor.

Its a general rule that small size eggs are the best egg buy for the money during late summer and early fall. Some people don't want to be bothered with small eggs, and are willing to pay the extra money for large size eggs.

If you buy the smaller sizes you'll find you can substitute a medium size egg for each large egg called for in recipes. If you use the small size egg, it will take three to measure the volume of two large eggs.

FASCINATING FACTS ABOUT NATURAL GAS

Out-Of-Reach
Before the modern era of steel pipelines, there was no practical way of moving Natural Gas from the well to the market—so it was wasted. Consequently, local gas companies piped manufactured gas through street mains for domestic service. The turn-of-the-century housewife was delighted with gas convenience but could not afford its luxury. Gracious Gas Living was only for the rich!

Finger-Tip Service
Today, a vast network of modern steel pipelines has changed all this. Clean burning with high heat value, Nature's miracle fuel is now being served at economical costs to consumers in every section of the country. Natural Gas journeys from the gas-rich areas to virtually every section of the country to bring Gracious Gas Living and Prosperity to millions of American homes, businesses and industries.*

*In 1870, a wooden pipeline 25 miles long was an accomplishment! At the beginning of 1959, the Natural Gas industry had enough miles of pipeline to circle the earth 22 times! In Consumers Power Company's area alone, there are 7,000 miles of pipelines.
