Free Contour Analysis Helps Determine If You Really Have To!

In a recent research program... Contour Analysis screening tests disclosed 94% of the scoliosis cases found to be positive by x-ray examination.

Contour Analysis involves taking a "three dimensional" picture (called Moire photography) of the surface of the back to help detect postural distortions. This analysis will be correlated with leg deficiency, patient symptomatology, and levels of spinal tenderness. Such composite examinations may indicate such things as normal and abnormal stress patterns, spinal curvature, muscle spasms, muscle imbalance, spinal distortion and scoliosis.

A free Contour Analysis screening test is also being offered for people with acute or chronic pain by the chiropractic office listed below. People who suffer with backache, bursters, arthritis, neuralgia, nerve pain, neck pain, muscle pain, bone pain, etc. are also invited to receive this free examination.

These tests, including consultation with the doctor, are being offered to the public at no charge, or obligation, for the next 30 days. Anyone wishing to receive this free examination may telephone the participating office directly for information or an appointment. If treatment, or additional examination, is indicated, almost all health insurance policies cover chiropractic care. All fees thoroughly explained prior to any additional service being rendered.
