Reflect on opportunities to add dimension to photographs

Focus on Photography

Monte Nagler

Reflections surround us constantly in our everyday lives. Have you ever noticed the reflected images in the exterior glass of a modern office building, that polished oil tanker you passed on the way to work, or even a pair of sunglasses? How about colorful, abstract reflections in an oil spill, puddles after a rain, or a breath-taking reflection across a quiet lake in early morning?

Reflections abound. If you tune your photographic *vision* their way, you'll have many marvelous opportunities to give added dimension to your photographs.

With building glass and metal surfaces, the reflected image will nearly always be distorted into a surreal, dream-like quality.

Mirrors, on the other hand, provide the truest reflections. In fact, mirror reflections can be so lifelike it may be difficult to distinguish between the actual scene and the reflected one. A photographer can often use this effect to his advantage to produce some surprising results.

When photographing mirror reflections, study your composition carefully and get in the viewfinder only what you desire. You may even want yourself in the picture for an unusual self-portrait. Use a small aperture to get as much depth-of-field as possible. This is necessary to keep both the reflected image and the scene surrounding the mirror in focus.

Water is the greatest source of reflections as shown in this shot taken in Hawaii.

Water, as artists and photographers have long known, is the greatest source of reflection, offering a great range of photographic possibilities.

On a calm, clear morning, a body of water can become an enormous mirror, reflecting almost perfect images of clouds, mountains, trees and boats. Just after dawn is the best time to find glass-smooth water, before the warming air stirs up breezes.

Water can also fragment reflections.

Slight surface undulations can result in an image with soft overtones while pronounced ripples can produce an abstract scene or even a collage of reflected colors.

Don't limit yourself to reflections that you happen upon. You can create your own, too. Mix up a batch of soap bubbles and you'll be surprised at the reflected pictures you'll be able to capture on film.

Or take a piece of crinkled aluminum foil and tape it to a sheet of cardboard. Place brightly colored subjects in front of it and photograph the reflections in the aluminum to obtain dazzling photographic effects.

Monte Nagler is a fine art photographer based in Farmington Hills. You can leave a message for him at (734) 953-2047.

Grace's 'Twisted Web' moves fast with lots of adventure

TWISTED WEB
By Tom Grace (Pocket Books, $6.99, paperback).

This action-packed adventure takes place in such far-flung spots as Antarctica, Paris, New York, Tucson, the Grand Cayman Islands, Argentina, and various spots in Michigan (including Livonia). It reacquaints readers with former Navy SEAL, Nolan Kilkenny (*Quantum Web*), an intrepid sort who lives on the outskirts of Ann Arbor in a vintage farmhouse with his father and grandparents. Actually, "intrepid "may not be the word to describe our hero. Perhaps "indestructible" is closer to the mark. Imagine the smarts and resilience of Bugs Bunny, combined with the muscles and brawn of Superman. You begin to draw a bead on Nolan Kilkenny.

Victoria Diaz

The rock-'em, sock-'em tale opens at a remote outpost on the continent of Antarctica. It's January, and we're at a place known as LV Research Station, where the temperatures range between minus 40°F and minus 128°F.

Two American scientists, Philip Collins and his wife, Nedra, are just closing down the station for the season, after conducting some sophisticated research on life forms found within an enormous lake beneath the icy continent. As Collins and his wife enjoy a glass of bubbly to celebrate their departure, a public relations approaches – a Lockheed LC-130R, "a variation of the venerable C-130 Hercules transport ... equipped with skis reinforced to her fuselage so she could land on ice."

Though the plane is devoid of celebrity, the hard-working scientists aren't complaining, since they're looking forward to a good meal, a warm bath, and other recreation as soon as they reach Christchurch, New Zealand.

They'll never enjoy the R & R, though. The crew that emerges from the plane is not the crew the scientists expected to transport them home. Instead, the men on the plane are killers who are after something in the research lab – something that may even hold the key to life itself. Soon, Collins and his wife are dead, and the villains are aloft with their stolen goods.

As much of this is happening, Kilkenny parachutes over Antarctica (at 35,000 feet, no less) from another plane. He performs this feat just in the nick of time, too, since the plane is soon taken out by a heat-seeking missile. Then, borrowing an iceboat from the other Antarctica research station (operated by Russians) he tries to single-handedly wipe out the villains at the American station. He doesn't get them all, but he does manage to wipe out several, and actually downs one of the two planes involved in the heist.

This story zips back and forth from one trouble spot to another, as the plot thickens. At some point, one of Kilkenny's most respected colleagues is accused of a double-murder in Ann Arbor. Kilkenny gets connected up with a former agent from China named Roxanne Tao (onscreen, Lucy Liu would be perfect in this role). And we get to soak up some information about genomes, and how some folks might make a killing at the stock market.

Twisted Web also serves as a fast-moving and fairly picturesque travel guide, plus it will probably prove especially intriguing for those who have a special interest in vintage aircraft. (The most admirable – and sometimes the most entertaining – thing about this book is Grace's exquisitely careful research. Its weakest point is the relative flatness of its characters – although, of course, characterization is often not at all the point in action-adventure tales.)

In addition to writing fiction, Grace is an architect – and occasionally, his description of structures, and over-use of such dry phrases as "cylindrical modules," "cruciform configuration," "triangular quadrant" tends to suck some of the juice from his story.

Ultimately, though, this is a comparatively small matter. Most readers will probably be looking forward to Grace's next novel after closing the covers of this book. *Dark Matter* is set for publication in Spring 2004.

Victoria Diaz is a Livonia resident and reviews books and movies for the Observer & Eccentric Newspapers.
