Rural Tele-news

LONG FURROWS: An improved type of telephone wire is used for rural service in certain areas where soil and weather conditions are unfavorable. It is *plowed underground* instead of strung on poles. Covering of synthetic rubber and steel mesh makes it stronger than underground wire previously used.

LESS PER LINE: We're building more rural lines and making good progress reducing the number of subscribers per line. Two years ago nearly half of our rural-line subscribers were on lines with more than eight parties. Today four out of five are on lines with eight or less!

BIGGER VALUE: Your telephone grows in value to you every day. That's because our construction program is constantly expanding the system . . . giving you a more telephone you can call . . . making possible more telephone errands to save you time and money.
