

Anyone looking forward to celebrating The 2nd Annual Detroit Riot this summer...

is too sick to go.

The illness has nothing at all to do with skin color. It can affect whites just as potently as it can blacks. With the same ultimate results.

Rumor has it some people already have the bug. Their numbers are few. And they can be controlled.

We can stop them cold with some individual responsibility on the part of every sane citizen, black and white, in metropolitan Detroit.

You see, even the sickest minds in our community can't go anywhere unless a whole lot of healthy people help them out.

The wonder drug here is reason. Use it. The bug can be fatal.

MUST
men united for sane thought
