A DIVISION OF **ERB** LUMBER CO.

At fix-it time, tools are the key

It is just as important to have good screwdrivers, pliers and soldering equipment at your workbench as it is to use durable, high quality construction materials for home improvement projects.

If you "cut corners" on either, the finished work will show it. Even worse, your sense of satisfaction that follows a job well done will suffer, and chances are there'll have to be a re-do in the not-too-distant future.

Here are some guides to the selection of some basic hand tools:

• Hand tools are designed to make a job easier and enable the homeowner handyman to work well, efficiently and safely. Knowing your tools and how to use and care for them will help—libraries have good handbooks on the subject

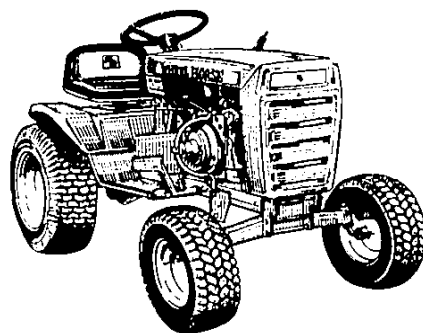

• Hand tools must be comfortable to use—balance, weight, size and handles are factors to consider. For example, many crescent pliers and wrenches are made with cushion grip, a red fiber-impregnated handle surface that insures

a positive and safe hold to prevent slips and skinned knuckles. Screwdrivers have oversize handles for better and easier grip and turning power. Some hand-saws have comfort-engineered wood grips; some soldering guns feature a compact balanced pistol grip; and certain measuring tapes are compact and easy to hold, some even have position-lock blades to permit one-hand use.

• Look for precision-machined tools with component parts that are perfectly mated to each other. Materials and finishes are important, too—drop forged alloy or carbon steels, chrome plating for resistance to humid or corrosive atmospheres, modern and durable plastics, U.L. wiring tags, firm and positive action of interchangeable tips—these are some of the signs of quality not always present in the ordinary "garden variety" of tools

Once you have outfitted your home workshop, organize it in any manner that suits you. But do organize!

BUY A HORSE... WHEEL HORSE, of COURSE
