

Looking sporty

Front and rear fender flares, a front air dam, blacked-out door and quarter window frames and a special striping give American Motors the new Gremlin GT the appearance of a high-performance car. The Gremlin GT is one of the new passenger car models AMC will unveil early next year. The GT also features a four-speed floor-mounted transmission and rally instruments with tachometer as standard.

Auto tips

Replacement tires

Soner or later, most motorists are faced with having to buy new tires to replace their worn-out ones. And yes, it seems those replacements, no matter what size or construction, "are terribly expensive."

For example, a brand-name steel belted radial tire ranges in price, depending on size, from about \$45 to more than \$135 each. Some are even priced around \$200.

A bias-belted name-brand tire, again depending on the size and in some cases the number of plies, ranges from around \$35 to as high as \$95 or \$100, excluding tax.

Bias ply tires range from as low as \$18 to around \$70 or \$75. Some go as high as \$130.

THE FACT OF THE MATTER is, the replacement tire on a cost-per-mile basis is one of the least expensive items you will ever have to buy for your car.

According to the latest report on automotive operating costs issued by the U.S. Department of Transportation (DOT), replacement tires cost less than one-half cent per mile over the 10-year life of an automobile.

Of total operating costs, DOT says that depreciation, repairs and maintenance, gasoline, parking and insurance are the greatest expenses. Only oil and accessories, such as floor mats and seat covers, rank lower than tires

on a cost-per-mile basis, according to the report.

The report points out that motorists seeking ways to reduce operating costs should use radial tires for lower gasoline consumption.

The report says even though radial tires cost about one-third more than bias-belted tires, motorists can expect at least 33 percent better mileage.

THE DOT STUDY was based on operation of 1976 models of standard-size, compact and subcompact cars. For a standard sedan, the cost-per-mile for replacement tires over the average 10-year, 100,000-mile life of a car is estimated at 0.45 cent of the total 17.88 cents cost that in addition to the five original equipment tires, the motorist will buy seven replacement radial tires, including three regular tires and four winter tires.

The subcompact car also is assumed to use radial tires and to need seven replacement radial tires, resulting in a 0.35 cent cost-per-mile of the total 12.64 cents cost for each of the 100,000 miles.

The DOT report studied compact cars with bias-belted tires, rather than radials. DOT predicts that the compact car owner will buy 11 replacement tires, including seven regular tires and four snow tires. Total cost-per-mile operating expenses will be 14.56 cents, with tires accounting for .39 cent per mile.

876 Oldsmobile

DELTA CUSTOM 1976, 455 engine, rear wiper, good transmission, 63-4237

DELTA 88, 1976, 4 door, 6 cylinder, good condition, 63-4238
