Radials can't

By PATRICK KELLY

Contrary to popular belief, ordinary radial tires are no substitute for snow tires for winter driving. In lossely packed snow, for instance, the tread grooves will pack up quickly, leaving the tire with a slick tread surface against the slippery snow at static temperatures.

a slick tread surface against the slippery snow at certain temperatures.

Many cities that have snow emergency regulations requiring snow tires or chains don't care how well radials are supposed to work in snow. If you get stuck without snow tires or chains and cause a traffic jum, you may be fined. There is a fine in some places just for traveling on snow emergency routes without snow tires or chains, whether you cause a traffic jum or not. If you plan to travel into other states, you had better know the law.

if you think you can put your old bias or belted bias snow tires on your new radial-equipped car, forget it. Mixing bias or belted bias snow tires with radials is a bad idea. If you have radials on the front, you should put ratidal snows on the rear. The handling of the car can be severely affected if

you don't.
For better tire care in cold and snowy weather:
•Keep the tires properly inflated. Reducing the air pressure does not increase traction, and excessions.

Can spring be far behind?

The weather may be bad in Michigan now, roof panels are made of tempered safety glass but it will get better. That's the time to pop off and fit into a vinyl case in the trunk. The Musroof of the new Ford Thunderbird T-Roof contant. It also will be offered with a sun room vertible and enjoy the sun. The tinted glass ... in the spring.
