

JUDGE DECIDES STOMACH REMEDY A GREAT SUCCESS

Commissioner of Mediation and Conciliation Board Tries EATONIC, the Wonder Stomach Remedy, and Endorses It

John William L. Chamberlain, Commissioner of the Board of Mediation and Conciliation, of the U. S. Board of Mediation and Conciliation, has written to him to express his desire that he be allowed to use the name of "EATONIC" in his correspondence regarding the wonder stomach remedy. Writing from Washington, D. C., he says: "I am sending you a copy of the letter I have written to the Commissioner of the Board of Mediation and Conciliation, and I have used it with his kind permission."

"EATONIC" promotes appetite and aids in the digestion of food.

Once workers and others who sit much are most subject to indigestion, heartburn, poor appetite, bloat, and indigestion of general nature. Are you not, as much as any one, in need of a stomach remedy? EATONIC will help you.

Here's the secret: EATONIC drives the acid out of the stomach. It is guaranteed to bring relief or you get your money back. Goods only a cent or two less than the cost of a box to buy from your druggist.

True Merit Revealed.
"Don't you admire some of the German poets?"

"Yes," replied the uncompromising man, "after they are translated into English."

WOMEN SUFFERERS MAY NEED SWAMP-ROOT

Thousands upon thousands of women have kidney and bladder trouble and never suspect it.

Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder trouble.

If a kidney is not in healthy condition, they may cause the other organs to become diseased.

Pain in the back, headache, loss of ambition, and other times symptoms of kidney trouble.

Don't delay starting treatment.

Dr. Kilmer's Swamp-Root, a physician's prescription obtained at any drug store, may be the remedy needed to overcome such conditions.

Get a medium or large size bottle immediately from any drug store.

However, if you want to test this great remedy, send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for sample.

When writing be sure and mention this paper—Adv.

To Cure Sore Throat.

So many people have been troubled with sore throat this spring. It is most unwise to allow this condition to progress, since many serious forms of sickness start with "just a sore throat." When the throat is raw, the ear, throat, and tonsils are often involved.

This is an antiseptic and removes the irritation. Again equal parts of Listerine, water and peroxide is even more effective. For an annoying tickling in the throat an application of hot glycerin rubbed thoroughly into the pores and covered with warm flannel gives relief.

Bee-Keeping in New Zealand.

At the late annual meeting of the Walkato Beekeepers' Association at Hamilton, an assistant director of the horticultural division of the department of agriculture stated that there were 4,301 registered apiaries in New Zealand, representing 50,523 colonies of bees. One beekeeper last year returned 30 tons of honey, which he sold at \$48 per ton, while some was sold at \$48 per ton, while some was sold at a high price of \$700 per ton, thus making it a very prosperous industry.

High as Haman.

There is one religious rite that war correspondents would often take despite the law—swinging the censor.

Compromising with sin only rewards virtue.

Put Into Practice

Conservation means the use of foods requiring less sugar, less fuel, and the minimum of wheat.

Grape-Nuts

requires NO SUGAR, NO FUEL, less milk or cream than other cereals, and is part BARLEY. It's a concentrated, nourishing, economical and delicious food TRY IT!

YOUNGSTERS PROVE RECORD PRODUCERS

College Awards State Champion-ships—St. John's Boy Is Best Corn Grower.

GIRL WINS WITH POULTRY

Miss Ruth Collier, Calhoun County, Clears Profit of \$279.55—Excels Elders—Others Make Fine Records.

From Boys' and Girls' Club Department, Michigan Agricultural College.

East Lansing, Mich.—Profit from one acre of corn, \$138.00."

"Profit from one acre of beans, \$150.00."

"Profit from farm flock of hens, \$272.55."

How do these strike you, Mr. Farmer, as examples of efficiency in food production? No, they are not imaginary figures—they are a summary of real reports from real boys and girls who have been awarded the crop and garden championships of Michigan.

The selection of the winner was made by the boys and girls club department of the state from among the 30,000 young people who during 1917 were members of boys' and girls' clubs in every part of the state.

When Michigan undertook to do its bit in 1917 toward helping keep the boys in khaki well supplied with food, the boys' and girls' club department of M. A. C. called on the young people to help. The club and girls' club department of the state to enlist. These young people, between the ages of ten and eighteen years, were formed into garden clubs, poultry clubs, vegetable-growing clubs, bean-growing clubs, and a number of other producing organizations.

The most efficient producers from among all these—and there were in the neighborhood of 30,000—have been selected as the all-state champions.

The coveted ribbons for crop growing were awarded by Harold Ray Coffey, secretary of St. John's in Calhoun County.

Glenn Widby, sixteen, of Dalton, won second place.

Then too, the manufacturer makes his profit by lessening the amount of copper sulphite in the commercial bordeaux.

Analysis by the experiment station shows that the standard brands of commercial bordeaux mixtures carry from one-fourth to one-tenth the copper of the home-made mixture.

Since it is the copper that kills the powdery mildew and it is the copper that stimulates the potato leaves, it is clear why the commercial bordeaux fails to produce the results.

And here let it be said that it was ability, and not luck, which enabled the champions to win as they did.

Take the case of Harold Coffey, the boy who won the crop prize.

He harvested 83 bushels of shelled corn off an acre of land, and after deducting expenses of \$183.00, he claims much of his corn was of such quality that he was able to dispose of most of it at seed-corn prices.

Harold's account of the methods he pursued to achieve these results might well be followed by many of his elders within the state.

I tested my corn by the individual ear method," he said, "and then I plowed the field early in the spring and allowed the stock to run over it a week. I plowed the corn and turned the soil so that there were no air spaces in it. Then I planted my corn, and it came up in about two weeks. I kept the ground well cultivated until the insects began to appear.

"My corn was caught by the frost on October 8, but it was nearly ripe by this time. I went through and selected the seed corn and began harvesting on October 15 and finished on October 30."

"The best method of curing this seed corn, I found, was to hang the ears, without touching, in an upstairs room, with the windows wide open.

"If I had to raise my acres of corn over again I could cut the cost of production and could also dry more seed corn. I believe that if every boy on a farm was given a chance to take part in club work and have something of his own there would be fewer leaving the farm to go to the city."

Glen Widby of Dalton, the boy who placed among the corn clubs, did almost as well as his St. John's rival. Glenn harvested 88.7 bushels, but he was not able to make quite as much profit. His net returns from his acre were \$98.05.

Glen Alrich of Big Rapids, the boy who made out better with his beans than any of the hundreds of others who took up bean growing, harvested a crop of 42 bushels, and a plot of ground about nine-tenths of an acre in extent. He was able to sell his crop for \$115 a bushel.

Glen's antiseptic and bright, the two oft' foes of the bean crop in Michigan, by scrupulously selecting his seed.

"When I sowed the beans in 1917," his report says, "I also handpicked them because I thought I would get better results. I removed the diseased and small beans from the seed I was going to plant."

"The first year, everyone diseases is to the 'large' healthy stalks before thrashing and have these threshed separately for seed, and pick out amounts to from 3 to 10 per cent of the crop."

Loss Because of Weeds.

An annual loss to the spring-grain growers of the Northwest due to destruction of the marketed grain because of weed seeds—present amounts to from 3 to 10 per cent of the crop.

HOME-MADE BORDEAUX BEST

Is Superior to Commercial Mixtures, M. A. C. Says—Urge Wider Use.

By DR. G. H. COONS, Plant Pathologist, Michigan Agricultural College.

East Lansing, Mich.—"Commercial bordeaux cost me \$400 in one year on my potato crop," said a family potato grower of Van Buren County the other day. "I have all the extra yield which comes from the stimulation of the crop by the old-fashioned bordeaux mixture, and I had poor disease control besides. Never again for me."

This statement gives a practical man's experience with a thine which test after test at experiment stations has proved conclusively—namely, that no patent bordeaux, regardless of the name of the manufacturer, has the potency of the home-made article which the farmer can prepare for himself in a fifty.

Home-made bordeaux is made by making a 2 per cent bluestone solution and a 2 per cent lime solution and then mixing them. The directions tell the farmer to take four pounds of bluestone and after dissolving this in a pail of hot water to pour it into 25 gallons of water. Similarly four pounds of lime are mixed with water and stirred into 25 gallons of water. Equal parts of these two solutions are then mixed—usually by letting them run in equal amounts from the barrels into the spray tank. Mixing must be thorough so that a good mixture is obtained.

The wrong way to make bordeaux is to put the lime and bluestone together and then add the water. This gives a very heavy precipitate that settles out quickly and has little spreading or sticking quality. Lime and bluestone interact chemically and the fine precipitate can only come when dilute solutions mix.

Here, then, is one place where some commercial mixtures fail. They have the bluestone and lime mixed together and the two chemicals do not go together in the concentrated state.

Commercial home mixtures are made by mixing strong bluestone solutions and strong lime (or soda) solutions together and the precipitate from this combination is dried. It is impossible to get up such a dried precipitate and get a good product comparable to the home-made article.

Then, too, the manufacturer makes his profit by lessening the amount of copper sulphite in the commercial bordeaux.

KIND TO PRISONERS—GUILTY

German Women Warned That They Will Be Punished for "Lack of Self-Respect."

Women, even the courageous German women, are now incensed to observe a writer in the Literary Digest. The German government has just discovered to its horror that Gretchen, in common with all the daughters of Eve, is not insensible to the charms of a well favored man, and, if given the opportunity, even is disposed to flirt. The Frankfurter Zeitung indignantly writes:

"Foul inhabitants of the German prison, who have communication with the unprincipled officers, and even throw things at them. Thanks, however, to the sharp lookout kept by the authorities, the attempts in each case were frustrated. The guilty persons, who belong to all classes of society and are of various ages, were discovered."

"Women, however, have been incited to have their husbands released on insufficient warrants in the belief that such unconscionable acts were due to a foolish desire for sensation. In future such conduct will be visited by very severe legal penalties and public exposure. These penalties will furthermore be imposed without discrimination on all who make themselves guilty of such lack of self-respect."

TOO WEAK TO FIGHT

The "come-back" man is really never really dead. His weakened condition because of overwork, lack of exercise, improper eating and living demands stimulation to satisfy his physical and mental needs.

Take, for example, the following: Three of these capsules each day will put a man on his feet before he knows it; whether he has kidney, heart, or other trouble.

Simple, yet as sure as "Gibraltar" spots. Simple—take one capsule, and apply a little of night and morning and you should soon see the results. The capsules are easily taken, the right dose having been determined by the physician.
