## Profits and Prices

Profits may be considered from two angles:

- 1st—Their effect on prices;
- 2nd—As a return to investors.

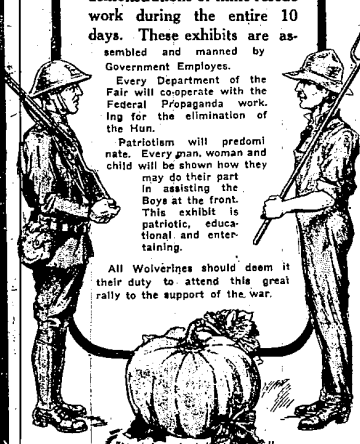

When profits are small as compared with sales, they have little effect on prices.

Swift & Company's profits are only a fraction of a cent per pound on all products sold, and if eliminated entirely would have practically no effect on prices.

Swift & Company paid 10 per cent dividends to over 20,000 stockholders out of its 1917 profits. It also had to build extensions and improvements out of profits; to finance large stocks of goods made necessary by unprecedented requirements of the United States and Allied Governments; and to provide protection against the day of declining markets.

Is it fair to call this profiteering?
