**Soft touch**

Great time to have pillow fight and it will be done in style with these special coordinated room accents featuring six prints and two correlating wallpapers. The soft-edged, pastel-colored designs are romantic in feeling, but not traditional as they work with most decorating styles.

Water under that umbrella

Large-leaved plants, both indoor and outdoor varieties, frequently create their own umbrella.

For example, some of the new kinds of wax begonias have dense leaves that shed the water that falls directly on them. When watering such plants, especially

those growing in pots or hanging baskets, take special care to see that the water is actually reaching the soil and not just running off the leaves.

Get your hose or sprinkling can under their "umbrella" and give the soil a thorough soaking.

WE'RE IT!
for professional help, call
453-8180

We use the most up-to-date methods of masonry refinishing. Marblelite is machine applied under pressure with the use of an acrylic bonding agent to insure the highest mechanical and chemical bond available today, and then troweled to a smooth, hard finish.
