

'No more nukes'

Hayden and Fonda talk energy

By CRAIG PIECHURA

Tom Hayden and wife Jane Fonda visited Detroit and Southfield Monday calling for a "new kind of citizenship."

The stop was part of a 35-day, 50-city tour promoting energy alternatives, and not California Gov. Jerry Brown, they said.

"We must think of citizenship in a different way," said Ms. Fonda, the movie actress whose name is usually preceded by the word "controversial" because of her early opposition to the war in Vietnam.

"It's not just voting and paying taxes," she said. "It's people taking part in economic decision making."

And the biggest economic decisions this country will soon be forced to make are decisions on how we curb our energy appetite and combat "disproportionate" energy prices, said husband Hayden.

Aquitted in the Chicago 7 conspiracy trial, Hayden now chairs the Campaign for Economic Democracy and was appointed to head the SolarCal Council which advises Gov. Brown on solar energy policy.

Hayden, 39, and Ms. Fonda, 41, spent the morning at a press conference in Detroit's Central Methodist Church and the afternoon at the Michigan Citizens' Lobby, 1911 10 Mile, Southfield.

Through his involvement in CED and the executive committee of the Citizens/Labor Energy Coalition, Hayden says he sees the danger of American, Arab and multi-national oil companies grabbing control of alternative energy industries — such as solar electric and hydro-electric plants — as well as fossil fuels and nuclear.

"What we find is a combination of federal bureaucrats and oil bureaucrats trying to smother very practical alternatives," Hayden said. "They are restructuring the marketplace and acting like these alternatives are way down the road. Well, we've seen senior citizen homes in Harrisburg, Pa. that are heated by solar power. The visitor area at Mount Rushmore is heated by solar power."

And, in colder, cloudier areas, like Michigan, we can use solar power in combination with wind and hydroelectric power."

Hayden extolled the virtues of producing gasoline produced by bio-mass, where organic waste and garbage is converted into fuel. He said oil companies should step up production of "energy crops" for gasohol.

PUBLIC LAND should be developed by citizens to generate energy, said Hayden, because while existing public utilities such as the Tennessee Valley Authority (TVA) "have a lot of problems, it's just cheaper than any other energy sources."

CED "wants divestiture" of private U.S. from taking over its competition." But Hayden said he has no confidence in turning the reins over to "Mr. (James) Schlesinger or Mr. Duncane, the president of Coca-Cola."

If government is going to get involved in energy policy, citizens must be seated on the board of directors of those companies. On his way to a TV appearance, Hayden also said he supports the UAW proposal to add a union member to the Chrysler board of directors.

"We say 'Bail-out, YES, Sell-out, NO,'" Hayden said of Chrysler loan proposals. "You don't reward inefficiency and mismanagement with a bail-out. It's should be a quid pro quo (tit-for-tat) arrangement if they agree to build a fuel-efficient car of the future."

Hayden said the company must seek out people with environmental expertise and not just persons who are "experts at the manipulation of finance."

ASKED BY the press if he would be supporting energy-conscious candidates, Hayden said "We don't see candidates as a solution," preferring instead to tap the "reserves of voluntary citizen action like the anti-war movement."

"We have people who are for one candidate or another (in CED) and some who want to shock the whole thing, who don't believe in electoral politics."

The media asked Hayden if he would "personally" support Brown's bid for the presidency even if CED didn't make an endorsement.

Looking annoyed, Hayden answered "No."

"Look, I'm not asked if he would be a candidate."

"Look, I'm not a candidate in the state of California," said the unsuccessful 1976 senate candidate from California.

"Or anywhere else," Ms. Fonda added.

"I represent the state of California in solar energy," Hayden explained. "I'm working for the friends and allies of solar energy causes."

Also at Monday's press conference was a wooden model of the Upland Hills Ecological Awareness Center in Oxford built largely with donated materials and volunteer help.

Ma Bell bows to gas crunch

Michigan Bell has launched a wide-ranging program to reduce gasoline consumption and to help both the company and its 10,000 employees deal with possible future fuel shortages.

The program includes a continuation of the replacement of full-size cars with compacts and subcompacts and a new plan using downsized cars instead of conventional service vans.

In addition, the company is allowing job swapping so more employees can work closer to their homes and encouraging supervisors to allow flexible work scheduling whenever work operations permit to make employee car and vanpooling more convenient.

About 10 vanpools are in operation with 110 riders.

Michigan Bell spokesmen say the company incurs a \$80,000 increase in its annual gasoline bill each time the price of gasoline rises one cent per gallon. This year Bell expects to spend \$5.8 million to fuel its 7,000 vehicles, an \$1.2 million increase over 1978.

Michigan Bell is downsizing its fleet of 1,700 passenger cars by purchasing compacts and subcompacts, according to spokesmen. In the last two years the company has bought 503 small cars — 102 compacts and 401 subcompacts.
