Why Chalmers knows The NEW EDISON gives his true voice

BECAUSE he has compared his voice with its RE-CREATION by the New
Edison. Because thousands of people have heard this comparison. Because
no one distinguished any difference between his living voice and his RE-
CREATED voice.

Don't take the word of an artist that a photograph gives his true voice.
See whether that photograph can sustain the comparison. If it can, you
know that such photographs do not give you the artist's true voice, but only
a mechanical version of it. Now, think about these things. Then remember that
the New Edison records in the comparison just that it is the only phonograph
which sustains the comparison test; and that we are showing a list to prove this to you.

If you have records, your credit is good here. You can arrange your payments
on a graduated agreement.

STUFF AND NONSENSE

A lot of the clothing customers have
to do clucking to keep the wearers from
losing them.

Advertising is a great thing. But
no drinker should talk sleep when
he calls on a sick friend.

Parrots are not the only things that
talk all the time without knowing
what they are talking about.

Some people keep themselves poor
pending money to keep others from
finding out that they are poor.

We hate winter. But we'll have to
admit that it makes the girls cover
their elbows, and that helps some.

You have often met a man who did
not profess to be a good judge of hu-
man nature, haven't you? Neither
have we!

Why do the thin lemon-fed girls
think they have to wear low waists
and high skirts just because the cor-
net girls look good in them?

Any married woman can tell you
that having a sweet disposition doesn't
help you any when you are trying to
handle a bundle. Chicago Evening Post.

ODD FACTS

The size of gloves indicates the
number of inches around the knuckles
when the hand is closed.

Strange Properties of Tourmaline.
The crystal, tourmaline, is capable of
attracting small bits of paper and
straw in much the same way as a
magnet. This attraction is, of course, due
to an electrostatic charge.

When the crystal is exposed to sun-
light of a low temperature it loses its
electrical charge, but regains it upon
being heated again. If it has a nega-
tive charge at first, it will have a pos-
itive charge when it is reheated.

Several other precious stones exhibit
phenomena about this time, but tour-
maline is the most interesting and
spectacular of all.

Taken Modernly.

"Mother, I just took a splinter out
of my hand with a pin."
"A pin! Don't you know that's
dangerous!"
"Oh, no, mother, I used a safety
pin."—Science and Invention.

THE BUILDING SEASON IS HERE

"The blossoms will soon be out and the bees will
be buzzing. The hammer and saw will soon be
heard throughout the land."

It is a pleasure, as always, in this period of renewed activity
to give our patrons the best service and maximum value which
it is ever our aim to secure them.

Your inquiries will receive personal attention; we are always
willing and glad to figure on your building needs, quote prices
in line with competitive market conditions and in general give
you all the information possible on your Building Problems.

When in need of lumber or building materials call at our office
get our prices and inspect the lumber you are buying.
