LEAVES OF SPRINGS REQUIRE ATTENTION

Without Lubrication They Soon Become Rusty.

Dirt, Mud and Other Foreign Matter Can Be Excluded by Use of Boots or Covers—Good Leather Substituents Is Best.

The leaves of an automobile spring are intended to slide upon one another when the car is in motion. Many car owners allow the springs to get dirty, to go without lubrication and to become very rusty. The leaves become so dirty that, instead of sliding on each other, they work almost as if they were one solid piece of steel. Then, when the car strikes a hole or a bump in the road the springs are compressed and, instead of each leaf working as a separate unit, the lower leaves of a rusty spring are held fast to the upper leaves. The reaction from the compression of such a spring is many times greater than the reaction of a clean, well-lubricated spring where the leaves are allowed to slip on one another as they should.

The first step towards a remedy is to keep mud and dirt and all foreign matter away from the springs. This can be done effectively by covering them with boots. Some supply stores carry covers to fit a good range of sizes of springs, but if you can't buy them already made, you should be able to make them yourself, sewing them together of leather or a good grade of leather substitute, advises Motor Life Magazine. The advantage of the latter material is that it is much cheaper than leather and, being waterproof, it will keep dirt and moisture from the springs. It isn't a very big job to make suitable spring covers, especially if you can get some of the members of the family interested in the point that they will sew the covers together on the sewing machine. Since the lubrication on springs provided in this way will remain in place a very long time and will not gather grit and dirt, the slight expense and trouble which the making and fitting of the boots will entail will be well worth the effort.

Keep Shackles Lubricated.

The shackles or hangers of truck springs must be kept properly lubricated. Rust often closes up the small joints and keeps the oil from performing its function. The use of a little kerosene at intervals will tend to keep these oil holes open.

Fordson

TRADE MARK

Farm Tractor

Has demonstrated its money-making qualities for more than ninety thousand farmers in the United States, because it gives better plowing, better cultivation and better harvesting, and therefore, better crops.

The Fordson Tractor is so simple in design and operation that boys and girls drive it.

It is made of materials of highest quality.

It is most economical in operation.

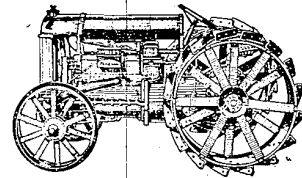

It has run 30 days and night continuously without stopping.

It is the necessity on every farm.

We not only sell Fordson Tractors, but also carry a stock of parts and employ Fordson mechanics to help you get the best results from Fordson.

Order your Fordson Tractor now. The demand is greater than the supply and orders are being filled in rotation.

Made by Henry Ford & Son and sold by.

AUTOMOBILE IS MADE IN KITCHEN

When Albert Peizel, Cincinnati auto mechanic, found himself out of a job because of sick times, he did not idle away his time but set to work at once building an automobile in which to take his wife and three children riding this summer. The fact that he lived in an upstairs flat and had no facilities for auto construction did not discourage him in the least for he used the family kitchen as a workshop. The tiny machine, which is equipped with a motorcycle engine, was built in five weeks. The body is twenty inches wide and made from tin from the roofing of a wrecked freight car. Peizel bought only about \$100 worth of material for his car. He says the machine will develop sixty miles an hour. When completed, Peizel called on some of his friends to help him lower it to the street through the front window of his flat. The photograph shows Peizel at work on his home-made machine while Mrs. Peizel and the three Peizel kiddies look on.

Japanese Sleeping Arrangements.

The Japanese bed, consisting merely of a few thick comforters and a pillow, can easily be made up in any room. It is considered a mark of hospitality to make the guest's bed in the parlor and put the room at his disposal.

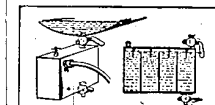

Microscopic Writing.

The British museum possesses a portrait of Queen Anne not much above the size of a hand, on which appear what seem to be a number of scratches. The scratches when magnified prove to be the entire contents of a book carried in the queen's hand.

WAY TO REMOVE IMPURITIES

Auxiliary Tank Arranged Between Fuel Receptacle and Carburetor Acts as Cleanser.

The Scientific American, in describing a gasoline purifier invented by W. R. Harris of San Antonio, Tex., says: The object of this invention is to provide an auxiliary tank adapted to be arranged between the fuel tank and the carburetor, for thoroughly removing from the fuel the impurities, such as water, dirt and the like, which tend to clog the communicating pipes. This tank is divided into vertical partitions reaching nearly to the top, and webs depend from the top, which tend to retard the passage of impurities from one compartment to the next.

A Perspective View and Vertical Section.

ing from the fuel the impurities, such as water, dirt and the like, which tend to clog the communicating pipes. This tank is divided into vertical partitions reaching nearly to the top, and webs depend from the top, which tend to retard the passage of impurities from one compartment to the next.

Replacing Radiator Hose.

When the outlet and inlet of the water system are close together, it is often difficult to get the rubber hose that connects the two in place. By linking up the hose, bending it in the middle, the two ends will slip over rather easily.

Changing Tires.

In changing tires on demountable rims considerable time may be saved by remembering that it is not necessary to remove the two lugs near the valve stem. This is just another instance where we ordinarily waste time by doing needless work.

BUICK

Present lines of New Buick six cylinder models will be carried thru the 1922 season.

Beginning June 1st the new series and prices will be as follows, f. o. b. factories, Flint, Michigan.

	Old Prices	New Prices.
Model 22-44 Three Passenger Roadster,	\$1795	\$1495
Model 22-45 Five Passenger Touring,	\$1795	\$1525
Model 22-46 Three Passenger Coupe	\$2585	\$2135
Model 22-47 Five Passenger Sedan,	\$2895	\$2435
Model 22-48 Four Passenger Coupe,	\$2985	\$2325
Model 22-49 Seven Passenger Touring,	\$2065	\$1735
Model 22-50 Seven Passenger Sedan,	\$3295	\$2635
