## CHECKING UP ON WHEEL ALIGNMENT

Checking up on the wheel alignment of a car is not hard to accomplish if the car owner will take the time to do it. The front and rear wheels on one side of the car should be put straight in line so that a string, as shown in the illustration, will come in contact with the tires at the front and the rear of each. Having lined the wheels on this side, a string should be carried to the other side of the car where the process is repeated. Should a distance of more than a quarter inch be found to exist between the side of the tire and the string, the wheel is out of alignment. The greater this distance the greater the wear on the tread. Having discovered this, the wheel should be properly adjusted.

Quality Goes Clear Through

More than two years were spent in studying the trend of body style both here and abroad before this Dort design was achieved.

It marks a new note in fine coachwork and distinguished appearance.

### PRICES

Touring Car	\$ 985
Roadster	\$ 985
Fourseason Sedan	\$1685
Fourseason Coupe	\$1535

## PRICE REDUCTION ON NASH CARS

We are very pleased to advise that the prices of NASH cars will be reduced, effective July 2. Prices of NASH trucks remain as they are.

The new prices of NASH passenger cars effective July 2, 1921, are as follows:

### SIX CYLINDER CARS.

Model		
681	5 Passenger Touring	\$1,545
682	7 Passenger Touring	\$1,695
684	7 Passenger Sedan	\$2,695
685	4 Passenger Coupe	\$2,395
686	2 Passenger Roadster	\$1,525
687	4 Passenger Sport	\$1,695

### FOUR CYLINDER CARS.

Model		
41	5 Passenger Touring	\$1,195
42	Roadster	\$1,175
43	3 Passenger Coupe	\$1,735
44	5 Passenger Sedan	\$1,935

"Our prices during the four years prior to October had risen only 31 PER CENT and the average price increase for all cars was 76 PER CENT."

## UNIVERSAL JOINT IS VITAL PART OF AUTO

No Portion of Car Works So Hard and Efficiently.

Takes Power of Engine and Transmits It to Propeller Shaft Which Moves According to Movement of Rear Axle.

There are hundreds of moving parts on an automobile or motor truck, but none works so hard and so efficiently as a universal joint. Such a joint is necessary on the propeller shaft extending from the clutch to transmission and from the transmission to the rear axle, as the case may be.

Universal joints are known to operate at more than 98 per cent efficiency, which cannot be said of any other part of an automobile doing such strenuous work.

The universal joint, as its name indicates, allows for free or universal movement of the propeller shaft. It is like your thumb, which you can wiggle in all directions.

A universal joint takes the power of the engine and transmits it to the propeller shaft. At the same time this joint may be constantly moving first in one direction, then another, but usually it moves up and down because the rear axle keeps moving up and down over the road.

The propeller shaft angularity varies according to the relative movement of the rear axle, and were it not for the use of universal joints the shaft would bend or break, and hence could not transmit power.

Every automobile uses universal joints on the propeller shaft. This is an all-metal joint, and the only car which this hard-working part receives is a little grease twice each year. It is remarkable how this part stands up even when owners forget it.

Most owners do not know what a universal joint looks like because it never gives any trouble, but the wise owner will not allow joints to go without grease.

Grease is easily injected through the filler opening by means of a suitable grease gun. The joint should not be filled completely—one-third full is sufficient.

## STATE FAIR LIKE GREAT UNIVERSITY

HAS SOMETHING TO TEACH ALL BY DISPLAYING BEST OF ALL PRODUCTS.

### GIVES TRUE REFLECTION OF MICHIGAN'S PROGRESS

Few universities are enabled to disseminate as much knowledge along the lines of all of life's activities as does the Michigan State Fair, which will hold its 72nd annual exhibition in Detroit, Sept. 2-11. For the people of the state generally the annual state fair is a font of information about the things they are most concerned with in their every-day existence.

The state fair exhibits show the best that is produced in agriculture, livestock, dairying, poultry, automotive trades, machinery, industrial work of varied sorts, road building, arts and sciences, city and country school work, home work, such as needlework, handicraft work, garment-making, canning and numerous other sorts of endeavor. No matter in what line or variety of lines any person is interested he can find much of an instructive nature among the fair exhibits.

Michigan's state fair has taken rank as the best in the whole of America. Its coming show will be greater in scope and size and pay more in premiums than any ever held before. It will be the most instructive exposition of its kind to date. "More than ever the state fair of today has become a leading educational institution," said Secretary-Manager G. W. Dickinson, of the state fair, discussing this feature. "It shows better than any other way can show how the state is developing and what it is accomplishing. It brings the people of the state together—the farmer, the manufacturer, the business man, the professional man, the woman interested in industrial or domestic matters, and the children who are just becoming interested in some line of life's activities."

"It shows to each one the best that is being accomplished in what he is most concerned with, and it gives to each one the opportunity to see what others are doing. The fair is a great mirror of the state's progress and this year it will have more to show than ever before in its history."

England is the heaviest buyer of American butter and cheese.

Tokyo is said to have more book shops than any other city.

At Lima, Peru, the sun is scarcely ever hidden by clouds for a day throughout the whole year.

## Fordson Farm Tractor

The Fordson cuts the cost of preparing land almost to half of what it cost with horses. But even more important is the fact that the Fordson saves from thirty to fifty percent of the farmer's time. And time saved—getting fields in shape to plant in the proper season; getting things done when they should be done—means money to the farmer. Besides it solves the labor problem.

As ever, the machine way is proving more efficient, faster, easier than the old way. In the factory, the machine increases production, saves labor—produces more at less cost. And that is what the Fordson does on the farm.

The Fordson way is the machine way of farming. Besides it solves the labor problem.

The Fordson's first cost is the lowest in the market; and the after or operating cost is lowest. It is a compact easily handled tractor, backed by the

greatest tractor service organization in the United States.

We are Fordson dealers. Not only do we sell Fordson tractors, but we carry a stock of Fordson parts and employ Fordson mechanics to help the farmers get the best results from the Fordson.
