

ABOUT COAL!!

Will the prices go up or down

We don't know, do you? We can't control the price but we can the quality and we are fighting for the best.

Today we have on hand the very best soft coal that ever came down the Grand River pike. Its four inch lump size of Virginia Splint and is the brightest and cleanest coal you ever saw. Not a bit of slack, dirt or dust. You can pick it right up in your hand. It burns to a complete finish. No clinkers to pave the alley. Come in and see some real coal and let's talk about next winter.

FORTUNE IN SHARKS

Extended Use Found for "Tigers of the Sea."

New Industry on the Pacific Coast Promises Big Profits for Its Promoters.

Victoria.—With the supply of raw material unlimited, an industry new to this country is flourishing at Parker Island, between Otilano and Marine Island, on the Gulf of Georgia. It is the business of catching sharks, and a week's catch at the beginning of May ran to 80, with an average weight of more than a ton each. Nelson Macdonald of this city, who operated the first shark-catchery machinery on the island, declares there will never be a shortage, as there are millions in the waters surrounding the island.

"In fact, the farther north you go the more sharks you will find, and from here to Alaska and their feeding grounds," Mr. Macdonald said. "Taking them from the bottom of the sea is automatic. Norway has hundreds of such industries. The only real hook for catching them, which works on a swivel, comes from there, and the so-called cod liver oil, which makes the magnets of the moon, is really shark liver oil, manufactured in Norway."

Nothing is wasted in a shark plant. There is no inedible fish meat than that made from the bodies of sharks. As a fertilizer it is superior to dogfish. The head of the shark is full of glue, a highly valuable quality, and the fins are a much prized Chinese food delicacy. Wholesalers here paying as much as \$20 a pound for it.

"The liver output runs from 60 to 70 per cent of fat, oil, of which about 10 per cent is glycerin. Shark's teeth are in demand in many parts of the world, but fetch a high price for the manufacture of ornaments. What bones there are, and they are sent up into the fertilizer part of the industry.

The greatest interest in this new industry is being manifested in the manufacture of hides. Several American companies have been formed, and much research work is being done at present. The shark hides run from an inch in thickness to the consistent size of paper in the baby shark. In Seattle they are manufacturing hip boots from shark hides and they are declared to be completely waterproof.

NOSE MADE FROM RIB BONE

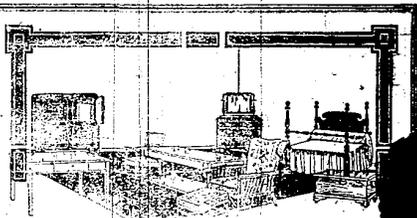

Miss Anna Karjunt suffered the loss of the bridge of her nose in an auto accident some years ago. Recently she underwent an operation in which a segment of one of her ribs was inserted in her nose. The photo shows the result.

Drove Weasel Out of Tree.
Hazelton, Pa.—Al Calvin Waldron and friends were walking along the mountainside at Conyngham they spied a full-grown weasel up a tree. While two of them threw stones at the animal Waldron stood guard at the bottom, and when the weasel came down he captured it alive.

Cat Catches Two Trout.
Holtz, N. H.—Helen and her cat went to bluish some of the fastidious Isaac Waltons. A fellow belonging to A. B. Eaton recently brought in two live trout, each measuring six inches. Where the cat got the trout Eaton does not know. She keeps her own secret.

Surgeon's Teeth Pulled, He Regains His Sanity

Duquoin, Ill.—Southern Illinois physicians saved at the recovery of Doctor Barz, prominent surgeon of Campbell Hill, who has just been released from the Southern Illinois Hospital for the Insane at Anna. Doctor Barz became violently delirious several days ago and was ordered to the asylum. Physicians there discovered that defective teeth were the cause of his condition and after these were extracted Doctor Barz, in two days' time, became perfectly normal and has been permitted to return to his home.
