Daily Thought.

Whatever you would make habitual practice it; and if you would not make a thing habitual, do not practice it, but habituate yourself to something else.—Epictetus.

Need New Supply of Nitrogen.

The more we get power from oil wells the greater the need is of obtaining nitro from the air. A vast amount of fertilizing material has been lost to American agriculture through the crowding out of millions of horses by millions of gasoline-driven vehicles.

Actual "Sight, Unseen."

In Morocco youths and maidens face badly injured for they are not even allowed to see each other before the wedding. Now and again a venturesome youth will hide himself in the room when the girl's woman is coming to pay the customary visit call upon his mother, but even this needs to be done with a considerable amount of caution.

Light and Dark of Moon.

The dark of the moon is that part of the lunar month when the moon is not visible. It may be considered as covering a period of approximately four days, two days before and two days after the time of the new moon.

The rest of the lunar month may be called the light of the moon. These are popular expressions and are not susceptible of precise definition.
