

# IF YOU HAVE A DIESEL POWERED CAR... YOU HAVE A DIESEL FUEL PROBLEM.

Water-contaminated diesel fuel is the number one cause of fuel injection problems in diesel cars. Bad fuel means expensive repairs. If you haven't encountered water-contaminated fuel, you will, because the problem's growing.

**RACOR** fuel filter/water separators have been the number one choice of heavy duty diesel truck service technicians for many years.

Now you can have this same reliable protection for your car's diesel engine in just minutes. Racor's patented process removes virtually all water and solids down to one micron in size from diesel fuel.

Write for our illustrated brochure on contaminated diesel fuel and **RACOR** filter/separators: Racor Filtration Division, 1137 Barium Rd., Modesto, CA 95351
