**Did you know  
we can find a breast cancer  
as small as the head of a pin?**

Such a tiny cancer can almost always be cured. A cancer of this size can best be found by mammography — a technique of low-dose breast x-rays. Using far less radiation than ever before, mammography can detect a cancer long before a lump can be felt. While the cancer is still highly curable.

Not every woman needs mammography. But for those women over 50 or with special reasons to be concerned, like those with symptoms or a strong family history of breast cancer, mammography can find a tiny cancer before it has spread. Ask your doctor about mammography.
