

Controlled Power Supplies It For Numerous Industries

FARMINGTON
Supplying power for industry is the sole function of an industrial firm located in the Farmington Freeway Industrial Park in Farmington Township.

Controlled Power Corp., an electronic manufacturer, launched a new dimension in high-power electronic systems when it introduced the first truly modular power supply for D.C. (direct current) applications.

The Farmington firm designs and manufactures high-power electronic systems to meet the demands of increasingly sophisticated industrial processes.

Controlled Power developed its system by creating application-tailored units of individually-protected, interchangeable modules in a complete range of sizes.

THE SYSTEMS ARE particularly applicable to metal finishing, metal working and electro-metallurgy, with prime applications in electropainting, electrochemical machining, anodizing and electroplating.

Unique benefits of Controlled Power systems are reliability, flexibility and expandability.

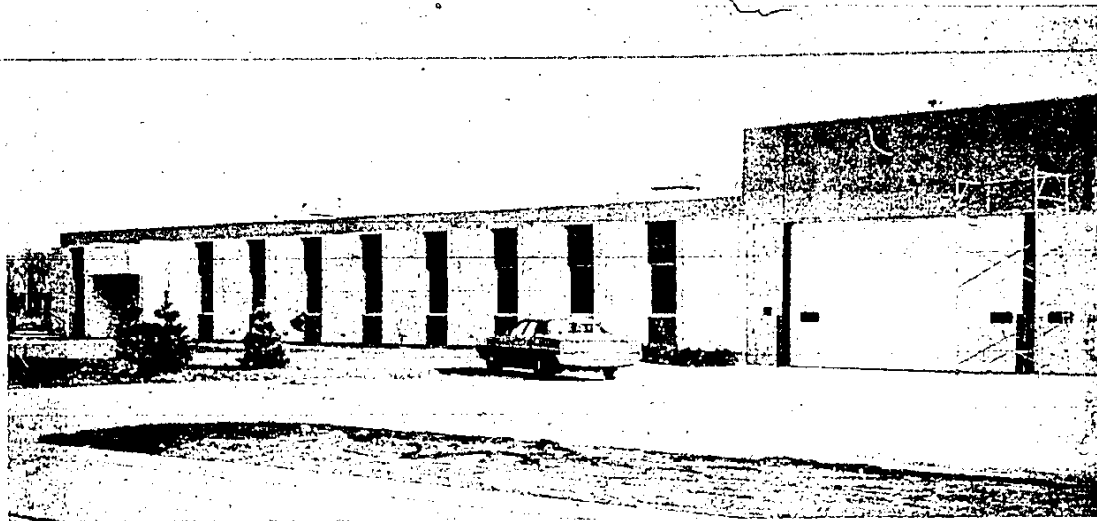

Power banks, consisting of individual modules, are available in a wide range of sizes with a com-

plete selection of automatic controls.

If after purchasing a system, the customer discovers he needs additional power to expand his operation all that is necessary is to add one or more modules to the existing bank of units to obtain added power required.

The management team of the relatively young firm had been associated with the Udylite Corp. before Controlled Power Corp. was formed in 1968.

In August 1968, Controlled Power occupied its 22,000 square foot plant in the Thompson-Brown developed industrial park.

AMONG THE NEW -- Norton Co.'s distribution center at 11820 Globe Road, Livonia, is among the many new buildings which have sprung up around the city. The sin-

3M Has Farmington Plant

FARMINGTON
One of the more illustrious names listed on the directory at the entrance of the Farmington Freeway Industrial Park is the 3M Company.

Last spring, 3M moved into its 58,000 square-foot sales office and warehouse located on 8.6 acres in the Thompson-Brown developed park in Farmington Township near 10 Mile and old Grand River.

Headquartered at St. Paul, Minn., 3M is a diversified manufacturer of products and services for industry, office, school and home, with more than 45 major product lines.

gle story, 85,000 square foot building houses sales offices and warehouse facilities for several of the firm's divisions which were located in Detroit. (Observer photo).
