**He Felt Better, So He Didn't Take All His Medicine. Then He Felt Worse.**

It's a familiar story. He started taking the antibiotic the doctor prescribed and within a day or two most of his symptoms were gone. He felt so much better that he decided not to finish the bottle.

"What's the point of taking it all?" he asked himself. "I'm over the worst. Besides, I don't like taking medicine all that much."

But the symptoms came back. With a vengeance.

Antibiotic medications include directions to take the medication until it is used up. Otherwise, the bacteria or other organisms that are causing the problem may not be completely eliminated. And that can mean trouble.

So, when you get any prescription, be sure you know—

- The name of the drug
- Its purpose — what conditions does it treat?
- How and when to take the drug — and when to stop taking it
- What food, drinks and other drugs to avoid, while taking it
- What side effects may result — are they serious, short-term, long-term, etc.?

If you have any questions about your prescription, ask your doctor or pharmacist.
