Henry Ford Hospital Complete health care for your community

○ WEST BLOOMFIELD CENTER for outpatient medical and dental services

Physicians representing more than 30 specialties provide health care for you and your family at Henry Ford Hospital's West Bloomfield Center. Lab tests and x-rays are all available in the same building.

The center's dentistry staff includes specialists in oral surgery, general dentistry, pedodontics (children's dentistry), periodontics (gum disease) and orthodontics (braces).

An ambulatory surgery unit provides one-day surgery for procedures in which recuperation time is short, but a surgical team and operating room is necessary.

The center's emergency room has 24-hour physician coverage and is equipped to handle minor as well as life-threatening emergencies. Henry Ford Hospital specialists are on call for emergency consultation. A new 24-hour walk-in physician service provides help for non-emergency medical problems which cannot wait for a regular appointment.

Community health care services at the West Bloomfield Center include a variety of health education classes and free blood pressure screening Tuesday and Thursday, 1-4 p.m.

● MAPLEGROVE CENTER for treatment of alcoholism/chemical dependency

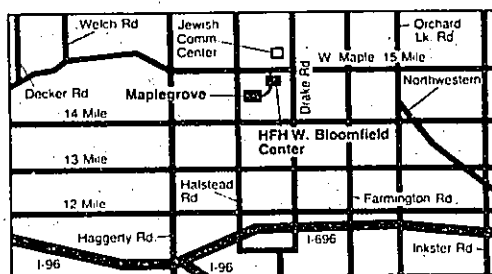

Located in a tranquil, wooded setting, Maplegrove is a free-standing center with 50 private rooms. It offers 28-day residential treatment for alcoholism/chemical dependency in adults. The facility also provides outpatient and aftercare programs for adults and an outpatient treatment program for adolescents age 14-19.

Maplegrove has attracted national attention for its extensive family involvement in the treatment program — a requirement for admission.

Intervention services, which help the family bring the resistant member to treatment, are provided by Maplegrove.

Outpatient treatment based on the Maplegrove model is also available at Henry Ford Hospital's Troy Center (phone: 689-7476). It includes an intensive evening program which, for some people, provides an alternative to residential treatment.
