Kids need guardian angels

Can't find a don who came non a cabbage patch? Then try one made by volunteers at the Methodist Children's Village in Redford. They call it a Guardian Angel doll, and claim it came straight from

heaven.

You doubt that? Well, take a look.
These dolls have the wings and halo to
prove it. However, if wings and halo do

can't find a dolf who came from a abbage patch?

Then try one made by volunteers at the Willage in edford. They call it a Guardian Angel immed edition dolf which has been early and can be trained edition dolf which has been early and can be trained edition dolf which has been early and can be trained edition dolf which has been early and can be trained edition dolf which has been early and the work of the work

The new computers will bring the total number in the college's network to nearly 1,000 this academic year. Further acquisitions next year will raise the total to about 1,200.

A major benefit of the new equipment is that it will provide engineering students, faculty and researchers with routine access to extensive graphics capabilities, Aktian noted. Thus, researchers will be able to test engineering designs, "drawing" them in the computer, without having to first create blue-prints or physical models.

U-M boasts best computer network The new equipment includes some 200 Apollo professional computer workstations and 300 Apple computers, including both the new Apple Lisa model and smaller personal copmuters. These machines will become part of the college's Computer-Aided Engineering Network, giving U-M's 5,500 engineering students unlimited access to dayanced computer equipment, which they help pay for through the payment of a mandatory \$100 per student. 'user fee' each term. (U-M officials noted that at most other colleges and universities, students are required to purchase their own personal computing equipment.)

ALSO PART of the U-M college's computer net-ork will be some 200 new faculty workstations.

The University of Michigan's College of Engineering will acquire \$8-million worth of computer equipment from two national computer firms, enabling it to establish the largest and most sophisticated computer network of any university in the

nation.
"These arrangements will enable the engineering faculty and students to have access to state-of-the-art computer technology before it is on the market," said Daniel E. Atkins III. He is associate dean technology of the faculty members in the fa

ket," said Daniel E. Aktinš III. He is associate dean of engineering and one of the faculty members in-volved in establishing the college's new Computer-Aided Engineering Network. Under agreements announced with Apolio Com-puter Inc., of Chelmsford, Mass., and Apple Com-puter Inc., of Cupertino, Calif., the U-M college will purchase some 800 Apple and Apolio computers this year at "substantially reduced prices."

THE AGREEMENTS provide for continuing co-operation between the U-M and the two computer firms, which will furnish the latest technology to the College of Engineering as it is developed. The agreements also will pave the way for the computer companies and U-M engineering faculty members to become involved in "joint research ac-tivities of mutual interest," Atkins said.
