**How to Make Invisible Ink**

Ever want to use a secret ink for writing? If so, the two simplest and most effective are: Just take a bit of milk of a bit of lemon juice and put it in a glass.

A clean new pen must also be used, so that no trace of black will appear on the "invisible letter." Dip the pen in the ink often so as to be sure it is wet and after the ink is finished, do not blot it, as that will absorb some of the invisible ink and the blotted portions will not show up well when it is desired to read the message.

To make either of these invisible inks visible, all that has to be done is to get the paper on which they are used good and warm and they will both show up plainly. Care must be taken when heating the paper not to burn it or scorch it.

**Why Turks Failed**

The tradition is that some bakers were working in a cellar one night in the year 1029. One happened to hear a muffled sound of digging. At that time the city was besieged by the Turks under Soliman the Magnificent. Guessing that the enemy were tunnelling a way into the city, the bakers gave the alarm. The aroused garrison was able to baffle the enemy. Eventually the Turks were badly defeated. In commemoration of these events, the Vienna bakers thereafter molded their loaves in the shape of a crescent, the sacred emblem of Turkey.

**Why Pacific Is Calmer**

The fact that the Pacific ocean is less subject to storms than the Atlantic is due to various reasons. Partly because of its great extent and partly because there is no wide opening to the arctic region, the normal wind circulation is on the whole less modified in the north Pacific than in the Atlantic. The trade winds are generally weaker and less persistent in the Pacific than in the Atlantic and the intervening belt of equatorial calms is greater.

**Why Maine Is Colder**

Maine is colder than France on account of the ocean currents. Off the coast of Maine there is a cold current coming from the polar regions and flowing southward. It cools the air and makes the climate colder. Off the coast of France is the Gulf stream. This gives a warmer climate.

**Two Bible Classes**

Baraca and Philathes are the names of two international Bible classes. Baraca means blessing and Philathes lover of truth. There are 9,000 of these classes in Protestant churches, which include thirty-two denominations, and the membership exceeds 1,000,000.

**Incandescent Lamps Exported**

During the past ten years more than 100,000,000 incandescent lamps have been exported from the United States to countries in every part of the globe.

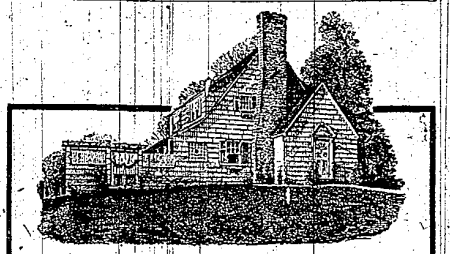

**Two Useful Purposes**

Successful business men always use and use you for one of two purposes: Either to boost business or to harm your company.

**Side Walls of "CREO-DIPT" STAINED SHINGLES**

**For a True Colonial Effect**

Especially the large 24" shingles, with heavy butts, laid with 10" exposure give an effect unequalled by other side wall material. Using random widths varying from 4" to 12", the monotony of a plain side wall is overcome. They are laid on as to break joints and provide a double thickness of these heavy "CREO-DIPT" Stained Shingles. This means a weather protection not afforded by other materials; a warmer house in winter—cooler in summer. The artistic advantages and the adaptability of "CREO-DIPT" Stained Shingles are beyond comparison. There are many color treatments possible. For true colonial treatment, "Dixie White" gives all the soft texture of Southern white-washed shingles without the "pinny look" so often noticed in wide clapboard and painted shingle work. The silver gray treatment is also considered very attractive and weathers beautifully.

"CREO-DIPT" Stained Shingles are cut from vertical grained red cedar, thoroughly seasoned, and treated by a special staining and creosote preserving process. Permanent stains made from finest earth pigments (no aniline dyes) are ground true in pure linseed oil and carried into the wood fibers. They do not rot or warp. Let us furnish samples of colors on wood and prices.
