Magazine researchers find an easier way

By Joanne Mallezewski staff writer

Remember the frustration of looking through the big green Readers Guide to Periodicals just to finish

big green Readers Guide to Periodicals just to finish your research paper?
Remember filling out the small yellow slips of paper with numbers and decimals you only hoped the librarian could figure out to find that last piece of information for your work?
Times have changed. InfoTrac has arrived at the Friends of the Library.
The \$17.000 purchase, financed by the Friends over a two-year period, will make looking for magazine articles quicker and far less frustrating.
The process is similar to using the Readers Guide to Periodicals. But three pieces of equipment— an index, a cartidge carousel and a reader/printer— are

used.

A contents guide — similar to the readers guide — is the first step. The reader picks a topic, then searches the magazine index. The index provides a code referring to the magazine collection in the microfilm cartridges.

THE NEXT step is to find the cartridge identified THE NEXT step is to find the cartridge identified by the code number. The cartridge is then placed lato the self-loading reader/printer. The reader will scan the microllined material until you stop it at the code number displaying the desired magazine article. The final step is the press of a button to make a copy. Copies are 10 cents a page.

"I think it's a very neat idea having this available," said Roslyane Greenberg, president of the Friends of the Library, "This purchase seems to reach out to the community."

community."
Through the library's automated circulation system,

the staff was able to analyze use of the magazine col-lection. Magazines account for about 8 percent of the two-branch library's total circulation. "Roughly two-thirds of the requests are unfilled," library director Beverly Papais said. The library either doesn't own the magazine, the is-sue is in circulation or it's difficult to keep "an ade-quate back file on microfilm or microfilche," she add-cd. So far, the library has about 300 magazines, from 1983 to present, on file in the InfoTrac cartridges. Magazines range from "Aging" to "Backpacker" to "Yachling."

"Yackling."
"We're in the process of analyzing what we have in microfilm and microfiche versus what's in the magazine collection." Fapal said.
Having infoTrac won't mean the end of magazine subscriptions for the library. "There will always be people who want to sit in the comfy chairs and read a

magazine," Greenberg sald.

BUT NEW magazines won't be microfilmed. The library will buy new cartrdiges for InfoTrac.
The InfoTrac magazine collection is beadquartered at the Farmington Hills branch. However, patrons in the Farmington branch have the microfilmed magazines index available and have the same access to the microfilmed magazines. A telefacismile machine is available to receive the necessary magazine articles from the Hills branch. Papal said.

available to receive the necessary magazine atteres from the Hills branch, Papai said. Having InfoTrac doesn't mean that the Readers Guide to Periodicals will be no longer available. "it's still being used. it's supplemental. Naturally, not ev-eryone can use the carousel at the same time," Green-berg said.

berg said.

But having InfoTrac will relieve the congestion at the Readers Guide to Periodicals, where there's gener-ally a line-up of five-to-six people, Papai said.

Drowning spurs tougher rules for field trips

New guidelines are in effect in Farming-ton schools for field trips, following the ac-ciliental drowning of a handicapped student during a school-sponsored outing last sum-mer.

during a school-sponsored outing last summer.

"Under the new rules, teachers planning such outings must submit detailed plans to the their principal for approval, and signed permission from parents will be required.

"A safety committee reconvened after the drowning to review the policy and spent nearly six months studying and preparing recommendations; it found inconsistencies in how school outings are handled at various billdings. New guidelines provide for a uniform policy throughout the district.

"The changes were prompted by the death of 'y-year-old Daniel Sanderson of Farmington, a severely handleapped student who attended Cloverdale Developmental Center in Farmington. He drowned while his class

was on a field trip at a Livingston County beach. Fifteen students and 8 staff mem-bers were on the swimming trip.

The new rules were presented to trustees during a March school board committee meeting. They also provide procedures for checking out a field trip site and written guidelines for teachers. Field trip manuals for each school were also proposed. "We're quite confident that what's in there is consistent with what's in the board polley handbook," safety committee chair-man Earl Bamunt told the board. The changes, which were reviewed by school attorneys before going to the board, have already been implemented, Baumunk said.

said.

They extend to both general education and special education student trips. The Cloverdale student who died was in the district's special education program.

"We generally concluded that what was good for one is go

THE NEW GUIDELINES require teachers planning field trips to:

• Request trips in writing, detailing number of students, adults and buses needd, plust the trip destination and purpose for trip. Trip plans will be approved by the principal.

• Complete a "field trip site data" sheet, which includes phone numbers and contacts at the site, information on emergency services and security and other safety factors. This may require research or phone calls by the teacher.

the teacher.

• Receive a signed permission form from parent or guardian, and, in return, leave information about the trip with that adult. No verbal permission will be accept-

Give chaperones a guideline/informa-tion sheet, advising them of their responsi-bilities. Only children from the class will be allowed on field trips.

IN ADDITION, a special form will be

used for trips out of the general area, or those out-of-state. Activities requiring trips throughout the school year, such as debate, band, chorus, forensies and others will be approved at the beginning of each school year on a "blanket" trip form.

year on a "blanket" trip form.

Guidelines for teachers require that elementary and middle school students be transported by bus, unless the trip site is within waiking distance, and that they not be allowed to bring unnecessary items. A 1-step review with all students will also be done, advising them of bus safety rules, conduct standards, the objective of the trip and a plan for the day.

a plan for the day.

According to safety committee member Frank Kasun, principal at Eagle Elementary, these items were "never (before) set down as a formal guideline for teachers."

Trustee Helen Prutow said she was happy to see restrictions on bringing additional children on trips, so proper time could be devoted to those taking the trip.

ALTHOUGH THE committee recommended keeping all forms on file for future reference in each school, trustee James Abernethy suggested they be centralized. If there are problems with a field trip destination, he said, the information can be shared throughout the district.

School psychologist and committee member Jim Miner offered the suggestion for a field trip manual, "which would alleviate "inconsistencies from building to building," he said.

"It made sense to put (forms) into some sort of binder that could be carried by that staff member on the trip," he said. "Everything is in one spot — everything is accessible."

The safety committee was extinable.

thing is in one spot — every sump — ——
ble."

The safety committee was originally formed in the 1970s, but had not met regularly until the August incident. They worked in conjunction with a safety committee of the board of education, comprised of chairman Jack Cotton and members Prutow and Abernethy.
