Parents of Walled Lake students who will switch schools next fall because of a major redistricting plan are urged to attend a series of informational meetings that will begin Tuesday.

Parents either have been notified by mail if their children are among the estimated 580 students who will be transferred. That number accounts for more than 10 percent of the district's 5,550 elementary students. The district includes northwest Farmington Hills.

Burgeoning enrollment and the opening of the new Pleasant Lake Elementary School near Halsted Road and Pontiac Trail prompted school officials to draw new attendance boundaries for students.

School officials have said they ex-

peet some opposition to the redistricting plan from parents who don't want their children moved from one school to another. But officials have vowed to make the transition as smooth as possible.

Students at four elementaries - Dublin, Twin Beach, Keith and Maple - will be transferred as officials implement the plan established by a 35-member redistricting committee that will conduct the public meetings this month.

**FINAL RECOMMENDATIONS** for the redistricting plan will be presented for school board action in April, according to district spokeswoman Lois Lange.

Here's a schedule of meetings to introduce the plan to parents, who will be notified by mail:

- Tuesday, March 13: Parents of Dublin students scheduled to attend

**WARMING UP**

"When you 'warm up,' you increase the blood supply to your arms and legs. Bringing more blood to these areas means a greater supply of oxygen to the muscles; they can stretch farther, contract more, and return to a ready state faster than before the warm up occurred."

Physicians use this information. Thus a common medical question is: "does activity make you feel better or worse?" If your condition involves muscles and tendons, then you start with stiffness, foot/better with activity and note pain returning when you stop to rest. Joint problems result from cartilage damage or joint lining cell inflammation. Impaired joints are better at the beginning of the day. become worse the longer you stand or walk, and are relieved by rest.

Another common medical question is: "are you better or worse at night?" Strained muscles ache at night because they are deprived of the extra blood supply activity brings. Pain is better at night, because the strain upon them is relieved.

A related, common question is: morning stiffness. Is the result of prolonged inactivity by usual movements at night. are unable to respond to the demand for immediate motion on
