## HAVE MORE THAN AN UMBRELLA FOR A RAINY DAY

It is often said that money is not everything, but if you want to dance you must pay the piper.

If you are looking to comfort, ease, and success a few years hence you must lay the foundation today.

No matter what the size of your pocket book now we have the right size of piece of real estate to fit it. We have every thing from lots to whole sections of land. Through the combined effort of six full time men we are in a position to give you the best possible service in this section of the country.

Even though you think you are not in a position to handle a large piece of real estate, remember that even though the stepping stones are small you will reach the same goal if you take enough steps.

### American Medical Men Praise Chinese Drug

An ancient Chinese remedy, esteemed in the East for 5,000 years, promises to become a powerful new tool in the hands of modern doctors. When introduced into laboratories of the University of Wisconsin by Dr. K. K. Chen, the drug stood stiff tests as a treatment for asthma and colds in the head, and also as a local anesthetic.

The drug which is being studied by Doctor Chen is known as ephedrine and is the active principle of a lowly herb.

"The plant has long been used by the Chinese as a treatment for asthma," said Doctor Chen in an interview. "It is characterized by the sweating which follows its use."

Used in asthma, ephedrine forces the muscles to relax around the air passages in the lungs. The effective area of the lungs is thereby increased and breathing becomes easier. Its use in a head cold is to close the ducts of the secreting glands, thus relieving the condition known as a running nose.

Because tests indicate that it is more powerful and more perfect, ephedrine is expected to supplant adrenalin, which is obtained from the adrenal glands of animals and put to a variety of clinical purposes. —Science Service Bulletin.

### Auto Industry Largest

United States census reports show that in 1919 there was \$32,666,633 invested in the perfumery and cosmetics industry in the United States, and that the total value of its products in that year was \$59,515,391. The automobile industry was reported to have represented, in 1919, an invested capital of \$1,780,948,952, and to have turned out that year a product worth \$3,080,073,979. The national automobile chamber of commerce gives the wholesale value of automobiles and automobile parts produced in 1924 as \$3,168,588,146.

### First Czar Human Monster

Ivan IV, who was the first czar of Russia, was notorious for his cruelty which gained for him the title of "The Terrible." In 1570 he had 60,000 of his subjects put to death.

### The Mowby Twins

By H. IRVING KING

(Continued)

EVERETT and Ernest Mowby were told them apart; but Ida Claridge said there was very little resemblance between them: it was surprising people could not see how superficially alike they were to Ernest. Ida was eighteen. The Mowby twins had just come to twenty-one—an age at which any normally constituted boy knows more than he ever will again. And both Everett and Ernest knew that they were in love with Ida.

As frequently happens in the case of twins their mental processes were connected by some mysterious link which resulted in a similarity as striking as their physical resemblance. "The Sacred Fire of Onondaga," said Everett one day: "I am going down to New York and make a fortune and come back and marry Ida Claridge. There is no chance for a fellow in this bunch."

"And I'll go with you," said Ernest. So Everett had a very tender parting with Ida and Ernest had a very formal one—for had she not chosen Everett instead of him? And could one twin be so devoted to another? Everett and Ernest went to the big city—and they succeeded in their schemes for its spoilation. Also they grew to look more and more alike, and Ida and Ernest promised to write each other often.

But at the end of the second year the exchange of missives had become fitful and intermittent—the pulse of love was skipping beats in an alarming manner.

The fact was that Everett had looked upon Aenes Carr and had seen that she was fair. Also he had looked up her father's rating in *Redbreast's* and had found it more than fair. And here came the first divergence in the mental processes of the twins. Or, maybe, the divergence had nothing to do with mental processes. As far as Ida Claridge was concerned their eyes were twins no longer. Flashed Ernest probed Everett as to the true situation. Everett frankly acknowledged that his love for the fair Ida had evaporated, or flown away, or something—anyway he could not find it lying around anywhere.

"And do you still correspond?" asked Ernest.

"Oh, once in a while," replied Everett. "But I guess Ida is as tired of the business as I am and is only prevented from telling me so by a fear of hurting my feelings. I'd tell her myself that we had better drop it—only a man can't do that very well, you know. A proposition of that kind has got to come from the lady."

"Let's see—we have been here four years now," said Ernest. "I think I will take a trip up home next week. There's none of our folks living there now, to be sure—but I would rather like to see the old place again." And pursuant to this declaration up state went Ernest. The first thing he did upon his arrival in the old home town was to seek out Ida Claridge. He found her sitting in a hammock, swung in the apple orchard, at one side of the house—and the apple trees were all in bloom. With the toe of one dainty little shoe just touching the ground she swung herself to and fro meditatively. The sunbeams came dancing down through the trees and tangled themselves in her hair; her pink and white complexion vied with the blossoms swaying above her; her dreamy blue eyes—in short four years had transformed a rather gawdy girl into a beautiful young woman. But to Ernest she had not changed a bit—she had always been beautiful to him.

"Oh, Everett," she cried, "how you startled me. I should have known you anywhere. I was just thinking of you two boys. Sit right down here and tell me all about Ernest—and about yourself, of course."

"I am Ernest," said he. For some reason Ida seemed rather relieved and laughed pleasantly. "Well," said she, "tell me about yourself then—and about Everett, of course. You know Everett and I used to fancy we were in love with each other—when we were children. My, but I am glad to see you."

Ernest stayed in the old town three weeks; at the end of which time Ida told him: "It was only after you and Everett had been away a while, and I began to realize that it was you that I was thinking about oftentimes, that I woke up to the fact it was the Ernest twin and not the Everett one that I was really in love with."

When they wrote to Everett announcing their engagement he sent them a magnificent wedding present and his blessing—and proposed to Agnes Carr; the same night.

### Famous Mountains

The name "Pillars of Hercules" was given by the ancient Greeks and Romans to Calpe and Abyla, two mountains, standing the one in Europe and the other in Africa, on opposite sides of the strait connecting the Mediterranean sea and the Atlantic ocean. They are known respectively at the present day as the Rock of Gibraltar and Jebel Zaton.

According to tradition, these mountains were raised by Hercules, while on his journey in search of the origin of Geryones. They were long regarded by the ancients as marking the extreme western limit of the habitable world.—Kansas City Times.

### French Inventor Plans for Airship on Rails

Paris bids fair to be the first of the world's largest cities to solve its rapid transit problems high in the air. Recent reports that the French capital indicate that actual construction work soon may begin on a remarkable high-speed air railway along which propeller driven cars suspended from an overhead monorail will travel 60 miles an hour, carrying thousands of commuters between Paris and the suburb of St. Denis.

Designs for the airway have been completed, examined by expert engineers and found to be practicable, writes Arthur A. Stuart in *Popular Science Monthly*. The proposed car for the Parisian line would be virtually a propeller-driven airship suspended from and running along a rail. Its body, tapering off at both ends like a dirigible, would be built of duralumin, extremely light, while it would be capable of carrying from sixty to one hundred passengers. The entire car, including equipment, would weigh only five tons. Present plans call for a car 40 feet long, 7 feet wide, 7 feet high, driven by a 9-foot propeller. The car would be driven by either a gasoline or electric motor. A reversible propeller would permit it to be run in either direction. Extra cars could be hooked on to a propeller-driven car in rush hours.

### Quill Pens

Quills for pens were first assorted according to their quality, then dried in hot sand, then cleaned of the outer skin, then hardened by dipping in a boiling solution of alum and diluted nitric acid. Attempts were made to fit points to the nibs, but this was found impracticable.

### Chemicals in Man

The following is an approximate chemical analysis of man, 5 feet 8 inches, weight 148 pounds: Oxygen, 22.4 pounds; hydrogen, 14.6 pounds; nitrogen, 4.6 pounds; carbon, 31.8 pounds; phosphorus, 1.4 pounds; calcium, 2.8 pounds; sulphur, 2.4 pounds; chlorine, .12 pound; sodium, .12 pound; iron, .02 pound; potassium, .31 pound; magnesium, .04 pound; iodine, .02 pound; total, 148.3 pounds.
