New Rifle That Fires

Thirty Shots a Minute

Lighter, simpler and more rapid in operation, a semiautomatic rifle designed for army use was given a successful demonstration by experts recently. It fired about two well-aimed shots to every one practical from guns of the present type, and there was no overheating. The gun is of .276 caliber, and one of its chief features is the breech mechanism.

Instead of being a right unit, it is constructed in three major parts that operate somewhat like the human arm under similar conditions. For instance, when the cartridge explodes, the breech is straight and locked until the thrust is overcome; then it begins to contract and bends upward, the forward part simulating the movement of the hand in withdrawing the empty shell.

The cartridges are carried in clips so designed as to hold ten in a double-row arrangement. The empty clip is ejected from the rifle along with the last fired case. The barrel is about the same length as that of the ordinary service rifle, but has a number of "fins" along the rear half

to assist in cooling. The rifle is to be adapted to the 1917 style of bayonet.—Popular Mechanics Magazine.

Good Points in New Arithmetic for Girls

Teachers are becoming more reasonable about arithmetic, and there is a disposition to get away from the old uninteresting problems over which generation after generation has worried. The modern idea is to give students problems which are of interest to them, and which will be of some benefit to them in after life. In this connection it seems it would be a good plan to give the girls problems dealing with a man's income. It would help a girl who is to become a wife in a few years if she were required to find how much money a husband who works for \$35 a week will have left after paying out \$10 for groceries, \$30 for rent and gasoline and \$20 for clothes and installments on furniture. This kind of arithmetic would give the girls a better idea of income and expenses and in this way prepare them for some of the disappointments of married life.—Kansas City Post.

Measure and Classify

Hairs on Human Head

The human hair may now be measured and classed as accurately as an automobile part. Charles Nessler of New York, president of the American Master Hairdressers' association, exhibited at their convention recently two machines, one called a "metrescale," and the other an "adjustable square."

The adjustable square detects the quantity of hair on the head with great accuracy. The normal human head, the instrument shows, has from 100 to 130 square inches of hair covering the scalp. The number of hairs varies from a mere 100,000 up to 250,000, depending upon the texture. Human hair grows at the rate of half an inch per month.

The metrescale analyzes the quality of the hair. It has shown that chemically the composition of human hair has striking similarity to wool, and, like wool, it shrinks. This machine detects the rate of shrinkage, which enables the permanent waver to tell what kind of hair can and what cannot be waved.

Amazing Figures in

"Census" of Universe

In the universe, in which the earth is a mere atom, there probably are 60,000,000,000,000,000 people—that is, 60 quintillions of them—remarks Capper's Weekly. The figures are an estimate of Astronomer Seares of the Mount Wilson observatory. He has counted 30,000,000,000 suns. Each of them has at least one attending world, we'll say, for the sake of argument. Allowing 2,000,000,000 people, the estimated population of the earth, for each of these worlds, the astronomer gets this staggering total. Professor Seares recently finished the big job of counting the stars in the heavens, a seemingly impossible task. It was done by mathematical calculation, as not 97 per cent of the stars can be seen with the most powerful telescope. With 30,000,000,000 suns in space the 60,000,000,000,000,000 people ought to be able to keep warm.

Tall Buildings

The Palacio Salvo, a new 28-story hotel in Montevideo, Uruguay, South America, is the tallest reinforced concrete building in the world. This hotel, which rises 381 feet above street level, is seven stories higher than the tallest building in similar construction in the United States, the United Brethren building, in Dayton, Ohio. Throughout the United States, however, there are many concrete structures of about twenty stories in height.

New England Leader

in Public Libraries

New England has always led and still leads the rest of the country in the means of satisfying intellectual wants. Let us consider books, for example. Maine has 119 libraries, New Hampshire 153, Vermont 115, Connecticut 155, Rhode Island 76, and Massachusetts 441, or a total of 1,059 for New England.

In Massachusetts there is no town without a public library. It is literally true that every person in this state is within easy walking distance of a public library. According to the United States bureau of education, the public and society libraries of Massachusetts (exclusive of school, college and university libraries) contained 8,250,884 volumes. New York, the nearest rival, with a population of 10,385,227 as against Massachusetts' 3,852,356, had 8,107,345 volumes in its public and society libraries. During 1925 the circulation of the Massachusetts public libraries alone was 21,400,000 volumes, or five for every man, woman and child in the state.

Thomas Nixon Carver, in the American Review of Reviews.

Youthful Artist Had

Sketch Well Planned

The teacher had spent nearly an hour on the drawing lesson that morning. Explaining the reason for every line, she had painstakingly drawn a dog on the blackboard. Then, after talking with the children about dogs they had seen, they were told to draw one.

The little folks got busy with their pencils at once and the teacher began to walk around the room examining the work. She stopped beside a little boy whose drawing resembled anything but a dog, and she said: "Albert, what is that? It looks like a boy. I asked you to draw a dog."

"Well," replied the boy, "that's the boss. He's calling Snubs, but he hasn't come yet."—Christian Science Monitor.

ROUGH STUFF

"Jack broke his leg the other day."

"Heavens! Hockey?"

"No, dancing the charleston."

Reggie—Should I marry, Miss Sarpe, I would never think of maintaining a regular establishment.

Miss Sharpe—No—light house-keeping would suit you best, Mr. Sapp.

NOTICE

The Seniors will sell automobile licenses beginning the week of December 6, the headquarters to be at the Ford garage. Watch for definite announcement in next week's paper.

NOTICE

Please return library books past due.
Mary Kennedy, Librarian.
