

## meets copy demand

One of the increasing demands by consumers in today's complex, technological era is for duplication of reports, computer output, and mountains of other such "paper work."

Bob Christ of Farmington's Executive Office Supply has cornered this market. Executive Office Supply, which is located in the Downtown Farmington Center, is the home of a Xerox 7000 copier. Xerox 7000 is capable of reducing a 14 X 18 inch original to legal or letter size copies.

There is only one other such model in the Greater Detroit area, according to Christ.

In addition to this machine, Christ offers his customers three Xerox machines in order to meet the growing demand for duplicating service.

Many Executive Office Supply customers use the Xerox 7000, which is insured for \$175,000, for computer printouts, ledger sheets and similar work. The smaller size is much handier for presentations and filing, Christ said.

He added that, "Each time some new equipment comes out, we investigate and are constantly upgrading our equipment to provide the most convenience and service to our customers."

The Xerox 7000 provides instant service because it has a top speed of one copy per second. It also is able to reduce copies of original material to five different sizes depending upon the detail of the original. Christ recommends Xerox for its ability to produce excellent copies on bond paper.

## plymouth is pace-setter in growth

By John S. Wright  
Industrial Coordinator of the Plymouth  
Area Planning Commission

There are numerous reasons for the residential, industrial and commercial growth of the greater Plymouth area, a growth which has set the pace for all Wayne County in the past decade.

Plymouth is on the western fringe of the Detroit metropolitan industrial empire, minutes to the heart of the Motor City in one direction and to Ann Arbor's research facilities in the other.

Plymouth is one of the two crossroads in Michigan for the C&O Railway, where east-west and north-south lines meet. Under construction now are the I-96 and I-275 freeways which also will

intersect at Plymouth.

Greater Plymouth -- a city and two townships -- boast approximately 60 separate and successful industries, demonstrating satisfaction with the abundance of skilled and non-skilled laborers available.

These advantages, combined with favorable local tax plans, have made the area increasingly important in Michigan's over-all livelihood.

### CYLINDER DIVISION

The Cylinder Division facilities in Plymouth, Michigan (left), and a few of the more than 1,000,000 different cylinders this plant and its personnel are capable of producing.

## PARKER HANNIFIN Plymouth

Parker Hannifin Corporation, world leader in fluid power systems and components, opened its Cylinder Division facilities in Plymouth, Michigan in 1965. One of five regional cylinder manufacturing and distribution centers from coast to coast, the Plymouth facilities now employ 40 individuals. The annual sales capacity of these facilities is \$3,600,000.

This growth is due mainly to the dedication the men and women of the Plymouth facilities bring to their jobs. Dedication to providing service to the Cylinder Division customers in their region.

This special dedication to service extends beyond their customers, and includes service to the fine Michigan communities they live in, as well. Their goal: "to make things a little bit better than they need to be," both in the products they make, and the communities where they live.
