ULTRAVIOLET'S
ALPHABET

According to a recent survey by the Skin Cancer Foundation, 85% of Americans who are below age 15 now report that they regularly use sunscreens. These harmful rays work by absorbing, reflecting, or scattering ultraviolet light before it reaches the skin. However, traditionally, sunscreens only focus on filtering ultraviolet B (UVB) radiation. This is the component of ultraviolet light that causes burning and tanning and increases cancer risk. However, the link to health and appearance does not stop there. Ultraviolet A (UVA) radiation penetrates the skin slowly and more deeply than UVB to cause fundamental underlying changes in skin tissue and blood vessels to addition to creating aging skin, it adds to the cancer risk of UVB.

To schedule an appointment please call our office at (810) 445-0810. Birmingham Dermatology is conveniently located in the Medical Village, Suite 17, on Southfield Rd. in Beverly Hills and we work with most insurance companies.

B.S. Future sunscreens are expected to filter out UVA rays as well as UVB.
