# Bacon Production in Michigan

By R. S. SHAW,

Medium Type Yorkshire Suited to Michigan Conditions.

Up to the present time the pork production of Michigan has complaredly from lard type bogs such as the Potand Chima, Chester White and Duros Jersey. These breeds are rath the Potand Chima, Chester White and Duros Jersey. These breeds are rath the production of conformation, quick making and furnish carcasses covered with deep layers of fat. In the past the lard hop, but necessities and tastes are changing. Animal fats are being rajoly replaced by vegetable and mineral olls for domination of the lard hop wegetable and mineral olls for domination of the core belt, where it can be produced to not the lard hop quite largely to the core belt, where it can be produced economically in great abused the mineral distributions of the availability of dairy by-product and the universal control of the core belt, where it can be produced economically in great abused conditions eminently adapted to the production of prime bacon on account of the availability of dairy by-product and the universal colorer, alfalfa, etc. The two breeds of hops most commonly known as bacon types are the two breeds of hops most commonly known as bacon types are the types and Tamworth, of which the latter is the mest extreme. As a rathet hose anceustomed to the compact land types do not like the backets of the core belt, where it can be production of prime bacon on account of the availability of dairy by-product and the universal colorer, alfalfa, etc. The two breeds of hops most commonly known as bacon types are the types and the most extreme. As a rather the accustomed to the compact land the colored the availability of dairy by-production and good mobility of the availability of dairy by-production and good mobility of the availability of dairy by-production and good mobility of the availability of dairy the production and good mobility of the availability of dairy the production and good mobility of the availability of dairy the production and good mobility of the availability of dairy the production and good mobility of the availability of dair

### How to Catch Flies by the Quart

By R. J. BALDWIN, Middigan Form Edmi.

So much alrady has been said concerning the filthy habits of house flies and the danger of their carrying disease, that a suggestion on how to keep them out of the home may be wickned and made use of Method on it has been and to resolve the house and in this are a disingrecable annoyance. The trap described in our illustration is a large form of a very old scheme which was not a success formerly because made too small and used in the house.

The trap shown in the illustration, its made of common wire screen, such as is used for doors and windows. The top and bettom of the house.

The trap shown in the illustration, its made of common wire screen, such as is used for doors and windows. The top and bettom of the frame are made from nail keg hoops and the three unright from lait cut in two A wire come is built inside that of the control in digriter is cut in the apex of the cone, and it is through this that the flies enter the trap. This cone should be made first and tacked on the outside of the bottom hoop before the outer cylinder of screen is put on. The cut edges of the screen can be tasked to the lath thus making it fly tight. The top can be closed by tying a cloth over it which can be removed when the trap is emptied.

An Effective Fly Trap.

Inch below the lower hoop, thus holding the trap up from the floor and allowing files and other insects to crawl under fund reach the bait.

The trap should be set up in some sunny place near the back door or in the stable where files are thick, and batted with such material as is known to attract files. The trap operates successfully when rotting fruit is placed on the floor under it, because the files will come to it and later light on the inside of the cone and later crawl up through the opening above.

Grading and Picking of Fruits

By C. P. I ALLIGAN,

By C. P. I MILGAN.

Michigan fruit growers are about to harvest a bountful crop of fruit.

Michigan fruit growers are about to harvest a bountful crop of fruit.

Most kinds it present seem to be prime condition, especially that which have been dearing that. The package shall dawy a be selected, according to a report property of the condition, especially that which have been dearing that the property of the condition, especially that which have been dearing that the property of the condition, especially that which will be supposed to the condition, especially that which will be supposed to the condition of the property of the condition of the property of the condition of the pole of the condition of the pooler graves or carelessy the condition of the pocker graves or carelessy that the package are supposed to a heavy crop, which means a well supplied market, much of the pooler graves or carelessy that the package are supposed from the package and therefore the package and therefore the package and therefore the package of fruit, however, consists and of the package of truit, however, consists and the package and therefore the package and the pac

that bigness of size is the desired character, but fruit of medium size, uniforning raided, is more to be district than large fruit mixed with smaller specimens. The take desired a great deal upon the package. A light, beat, uniform and attractive package which sets off the fruit to jadvantage should always be selected. There is a great deal of tinth in the joid saving, that, "The package sells in the fruit." It would pay most of the growers of Michigan to enables of the fruit of the fruit. It would pay most of the growers of Michigan to consider in a mailer and more attractive package for their peacheg and other larger fruits than the bushed basket, and as a rule the flarer grades of fruits pay between the fruits than the bushed basket, and as a rule that flarer grades of fruits pay between the flarer grades of fruits pay here in the package are in more than the format of the contractive package and therefore the flarer grades of the grade

Rebellion Breaks Out Near Havana.
An uprising headed by Gen. Acevado and a group of anti-government men, has broken out in Cube.
The government has started to move rurales, against the rebels and hopes to quell the outbreak in a short time.

hopes to quell the outbreak in a brott time.

The uprising is apparently of a serious character and occurred at Regia, a suburb of Havana, situated across the barbor. Gen. Accesdo, who is a revolutionary veteran, with few companions, armed and mounted, took the field. It is reported that the party was reinforced later by 200 men.

Eight Maniaca Perish in Flames.
At least eight, and perhaps 10 lives were lost in a fire which partly destroyed one of the main buildings of the insane asylum on the side of the mountain southwest of Hamilton,

the mountain southwest or the building when the fire was discovered and mass only a well-trained fire-fighting corps and splendid coolers and bursers and bravery among the nursers that averted a frightful loss of life.
