The right touches tie a home together

One sign of a successful project is when all of the parts come together and make sense as a whole. In a recent phonoconversation with a potential client, I tried to explain, amone explain, among other things, that while there

are many nice faucets on the market, just one or two could be a good match for her project. This issue came up because I was trying to explain my plan "B" contract whereby the client is responsible for picking out all

of the finish items, which include plumbing/electrical fixtures and cabinetry. (Which, by the way, saves a typical client about 5 percent of the cost of the bome). My point was that while "X" might be a nice Georgian faucet, it would make no sense in a Victorian house and that one must be careful to avoid selecting such a faucet because one merely a flikes "X". Good architects can make sense of the whole and can usually "tie it all together.

In order to avoid making such a "blunder," one must know not only what style the house is but also what the details are that are used in the house. If the house served a se a standard large-scale or exterior detail,

board-to-wall pletail or as a drawcr-pull detail.

Even the colors that are used
in a house may not be random
for example, the early Post-modcrnist architect Michael Graves
had a reason and an explanation
for overy color on his project
and these were complexly colored projects). Some colors relattions to the sky and some to some
imaginary distant landscape, but
these same colors would relate to
the exterior palette and the
tuilding materials that were
being used.

Sometimes I have this habit of
introducing a certain material:

there may be the opportunity to use the same detail at a smaller scale, for example at the base-board-to-wall detail or as a draw-or-pull detail.

Even the colors that are used in a house may not be random-for example, the early Post-mod-craits architect Michael Graves and a reason and an explanation for every color on his projects (and these were complexiy colored projects). Some colors relations to the bathroom cored projects. Some colors relations to the same properties of the same properties are maple and so are all of the color projects. Some colors relations to the same properties are maple and so are all of the color projects. Some colors relations are maple and so are all of the color projects. Some colors relation are same properties are maple and so are all of the color and using it in certain areas and intentionally reasons are manulationally areas and intentionally reasons and

"lines" can be reveals (subtractive) details or applied trim (additive) — either one works well to unify a project. A consistent use of geometry can also be used to tie a project together.

Geometry can help tie a project together by repeating certain elements over and over again; the artful part is not to bere the viewer with toe many repetitions. An arc can be found to have a major function or scale but can also respear again at a smaller scale or even in the light fixtures in the room for which the arc applies.

If you are designing a project yourself, keep your eyes open for

opportunities to make the project consistent with itself. Compare all of your choices with each other and ask your friends if they think that the choices are harmonious. Changes are easy now before the fixtures are installed or bought.

On the other hand, you could always call a good architect.

Steve Sivak is a licensed architect in private practice and an adjunct professor of architecture at Lawrence Technological University in Southfield. He specializes in well-rafted residential and commercial architecture and can be contacted at (313) 769-8502.

You can paint the dark paneling to lighten up a room

Q: Soveral years ago, I pan-cled three rooms with a dark shade, low-priced paneling.

3 & 4 Bedrooms, 2% baths up to 2200 sq. ft. ifireplace, great room
walk-outs available Immediate Occupancy!
West side of Millord Road, Four Miles
North of I-98 (South of GM Road) give the paneling prior to painting? Should I use a brush or a roller?

painting? Should I use a brush or a roller?

A: Prior to painting, the walls should be cleaned thoroughly. If these are kitchen or bathroom walls they may have become grease- or scum-cated. Wash them down with a detergent solution on a nearly dry cloth to remove the coating without delaminating the paneling. If the walls are dry, make sure they are dust-free to avoid lumps in the paint job. They should then be covered with an oil-base paint primer – one that will not allow the stain on the panels to bleed through. Some stains contain a dye that can be dissolved by paint or primer and dark stains like yours can show through the primer coat. Before priming, try out a small, obscure area to see if the stain bleeds through. If it doesn't, then prime all the walls using either brush or roller. Let the primer coat dry completely before applying the finish coat because even slightly dampy primer cannot seal properly. Once the walls are sealed with primer, put on the finish coat of your choice.

If the stain does bleed through the primer, you will have to use a stain-suppressing primer. There

the primer, you will have to use a stain-suppressing primer. There are several brands of these. One such primer is called Under Cover, manufactured by Parks install a second water heater to can I do to eliminate it?

Corp. (800) 225-8543. It costs about \$17 per gallon.

Keep in mind that for domestic A: The rotten-egg of

Q: I would like to replace the existing forced-air cen-tral heating system in my house using an existing water heater as a source of hot water. Also, what are the disadvantages of central water heating systems?

A: The main disadvantage of forced hot-water heating systems applies to those homes in areas such freezing the winter heating systems applies to those homes in areas with freezing temperatures during the winter. In the event of an extended power failure, the distribution piping could burst.

Another disadvantage is that the system cannot provide for a central humidification system, the way a warm air heating system can.

You can use a water henter as a source of hot water. However, the BTU (heat) output of a water heater per hour is considerably less than that needed to adequately heat most homes. This setup is more effective in heating an addition than the whole house.

If you use the water heater to supply hot water to baseboard

If you use the water heater to supply hot water to baseboard radiators, you will need to keep heating water separate from the domestic (potable) hot water sys-tem. That is, you will have to

0.0

install a second water heater to provide domestic hot water.

Keop in mind that for domestic hot water, the temperature range is 120x-140x F (it is usually set at 120x F since 140x F is scalding temperature). For a heating system, the normal operating range is between 180-200x F if you operate the water heater at the lower temperature range (120x-140x F), you will need more radiators or baseboard convectors per room — at a greater initial cost.

Another reason to separate the potable water from the water used for heating is that during the summer there is no water circulation in the heating system piping. Bacteria grows in this warm stagnant water. If the two systems are not separate, this water when the heating system is turned on.

Like any water heater, one that is installed for heating purposes should be equipped with a thermocouple control for the gas valve and a temperature/pressure sensitive relief valve.

Q: I have a problem with my well water. It smells like rotten hard-boiled eggs. The water is soft and I have no rust problem. I like the water except for its smell. What causes this smell and what

A: The rotten-egg odor is caused by the hydrogen sulfate gas in the water.

Hydrogen sulfate is commonly found in well water and is changed into hydrogen sulfate gas by the activity of nonharmful water-borne bacteria. You can stop the biochemical reaction that forms the gas by killing the bacteria with chlorine. Check with your local health departments of the control of the charmen how much control of the co
