FIGHTING GUM DISEASE WITH MEDICATION

It is now possible to allow the progress to go more advanced stage, patients are often faced with the prospect of surgery; however, a recent study indicates there may also be a medical option. The study, conducted at the University of Michigan School of Dentistry, involved 90 patients with periodontitis so advanced that surgery and tooth extraction had been recommended. Instead, researchers first removed plaque and tartar from the roots of their teeth and then gave the patients antibiotics (metronidazole or doxycycline) known to kill gum bacteria. After the antibiotic treatment, only 17 of the patients still required surgical treatment. As promising as this treatment may sound, it is not an adjunct, not an alternative, to surgery.

Except in rare cases, gum disease can be prevented by thorough daily plaque removal by brushing, cleaning between teeth with floss or interdental cleaners, eating a balanced diet, and regularly visiting us at LIVONIA VILLAGE DENTAL ASSOCIATES for professional cleanings. For dental care that will bring you into the 21st century, call 478-2110 to schedule an appointment. At LIVONIA VILLAGE DENTAL ASSOCIATES, we provide a full range of dental treatments, including preventive, restorative, and cosmetic dentistry. We're located at 19171 Merriman Road, Livonia, MI 48150.

LIVONIA VILLAGE DENTAL
19171 MERRIMAN ROAD, LIVONIA, MI 48150
(248) 478-2110

P.S. Unless the tissue damaged by periodontitis is removed in conjunction with antibiotic treatment, the infection is likely to return after the medication is discontinued.
