LOOSE DENTURES?

Now you can have what you crave!

Visit Dr. Nader Bazzi in the morning, have the "Mini-Implant System" placed in less than two hours, then go out and enjoy your favorite lunch.

What are MDI Implants?

The MDI System consist of a miniature titanium implant that acts like the root of your tooth and the retaining fixture that is incorporated into the base of your denture. The head of the implant is shaped like a ball, and the retaining fixture acts like a socket that contains a rubber O-ring. The O-ring snaps over the ball when the denture is seated and holds the denture at a predetermined level of force. When seated, the denture gently rests on the gum tissue. The implant fixtures allow for micro-mobility while withstanding natural lifting forces.
