Cancer experts issue nutrition auidelines

The American Institute for Cancer Research has issued nutritional guide-lines for cancer survivors. The guide-lines are intended to help cancer sur-

lines are intended to help cancer survivors following treatment choose foods that will reduce risk of secondary tumors or recurrence of their cancer.

"During treatment, many cancer survivors need to eat whatever foods they can tolerate to maintain strength. But after treatment, they often ask what changes they can make in their diet and activity level to regain energy and then stay healthy and cancer free," said Jeff Prince, AICRs vice president for education.

Physicians are often reluctant to offer dietary recommendations to cancer survivors since science-based conclusions have been lacking. As a result, many

dietary recommendations to cancer survivors since science-based conclusions have been lacking. As a result, many survivors are persuaded by anecdotal evidence and marketing programs to overdose on untested supplements. AICR is actively promoting research on diet, exercise and enancer survivors through conferences, its grant program and its new fellowship program. "Meanwhile, we are issuing seven dietary guidelines for cancer survivors based on the extensive research that has been done on the link between diet and reducing the risk of primary cancers. There is a consensus among researchers and clinicians that, until more is known, cancer survivors should regard these guidelines as relevant to their situation," Prince said.

The seven guidelines are: Choose predominantly plant-based diets rich in a variety of vegetables and

2. If eaten at all, limit intake of red 2. If eaten at all, limit intake of red meat to less than three ounces daily.
3. Limit consumption of fatty foods, particularly those of animal origin. Choose modest amounts of appropriate tegetable oils.
4. Limit consumption of salted foods and use of cooking and table salt. Use herbs and spices to season foods.
5. Limit alcoholic drinks to less than two drinks a day for men and one for women.

6. Do not eat charred food, Consume the following only occasionally: meat and fish grilled in direct flame, cured and smoked meats.

and smoked meats.
7. Avoid being overweight and limit weight gain during adulthood. Take an hour a brisk walk or similar exercise daily.

Commentary of these guidelines appears on AICR's new online Cancer Survivor's Guide at www.aicr.org/survivor.

DEPRESSION

FROM PAGE C5

INCREASED RISK

The risk of suicide increases greatly with untreated depression. Suicide rates thave risen 300 percent since the 1950s (although in most groups those rates have lev-eled out during the past

eled out during the past decende).

The strongest predictors we have of suicide are a past history of a suicide attempt and a current clinical depressive disorder, said Dr. Cheryl King, director of the Child and Adolescent Depression Program at the U-M Depression Center in Ann Arbor.

It is also important to note.

Arbor.

It is also important to note, she said, that a conduct disorder - patterns of antisocial or aggression, can also be a strong predictor of suicide, as can substance abuse.

Parents need to watch for signs and show that they care if they suspect a teen is contemplating suicide, said King.

Talking with young people

about suicide won't put the idea in their heads," she said. "So we ask people to be direct in a caring way. Ask: Are you thinking about suicide?"

SEEKING HELP

If you do suspect depression, your family physician can rule out additional possibilities. Other mental health problems, a thyroid condition, or mono infections can sometimes mimic depression. However, if the diagnosts is depression, parents can seek help from a number of sources.

help from a number of sources.

The American Academy of Child and Adolescent
Psychiatry cautions against using the Yellow Pages as the only source of information and referral. Friends, family, a spiritual counselor, physician or school counselor may be able to make a referral to a professional with experience treating adolescents.

Some other sources of information suggested by the AACAP include Employee "Assistance Programs through your employer, county men- all health departments or national professional organi-

zations such as the AACAP.

zations such as the AACAP.
Depression is a very treatable illness. With proper
care, most teens can function
normally. Untreated, howeveer, depression can have lasting effects on the life of a

ing effects on the life of a teenager.

The natural course (of major depression) could be three, six, or even 12 months to resolve by itself, said Dr. Marilyn Hamer, a board-cer-tified child psychiatrist with Henry Ford Behavioral Health in Detroit and Birmingham. That's a whole school year

"That's a whole school year of socialization, learning how to interact with the opposite sex, gaining more independence and making plans for after high school. A year is a long time for a teenager.

Most experts recommend more than one method of treatment to treat depression.

sion. "Usually a combination of psychotherapy combined with medication works well for depression," said Hamer. These days the standard of care are the SSRIs." Short for Selective Canatonia Reuntake

Scrotonin Reuptake Inhibitors, SSRIs are thought

to increase amounts of sero-tonin available to the brain, which helps to improve mood. Some of these include Prozac, Paxil, Zoloft and

Prozac, Paxil, Zoloft and Lexapro.
Today's medicines are much improved over those used to treat depression in years past. An adjustment period is often required to find the most effective medicine and the correct dosage for a particular person, but the SRIs are generally touted as being safer and more effective than the older anti-depressants.

effective than the older antidepressants.
Cognitive therapy has been
recommended for those with
depression. It is a type of therapy that helps restructure
regative thinking patterns so
depressed teens can see things
in a more positive light.
Parents should be aware
that it could take some time
to find the therapis best
equipped to serve the needs
of their teen.

'If a teenager is seeing a

of their teen.
"If a teenager is seeing a
therapist and it is not going
well, the patient needs to
know that it is their prerogative to get a second opinion,"
said Hamer.

In addition to therapy and

In addition to therapy and medication, depression support groups can also be valuable for parents and teens. "It can be helpful to go to meetings and talk to other people who have been in the same situation," said Hamer. There are people in these groups who are for medication, and people who are against it, people on both sides of everything."

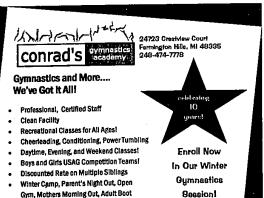

The MDDA of Metro Detroit is one such group.

The MDDA of Metro
Detroit is one such group.
Affiliated with the former
National Depressive and
Manic Depressive and
Manic Depressive and
Support Alliance, the group
provides "support, hope and
education for individual
diagnosed with bipolar or
unipolar, their familiee,
friends and their treating
professionals," said MDDA
board President Mary Ann
Bozenski,

Bozenski.
More than 60 meetings are available per month, including a Family Members group and a meeting for Adolescents/Young Adults.
Many of the meetings take place in Wayne and Oakland counties.
