MAN SHOT FROM CANNON IN CIRCUS AT PONTIAC

Ever on the alert for new sensations, the Hagenbeck-Wallace Circus has engaged "The Great Wilno" who is actually shot with violent velocity from the mouth of a monster cannon. Wilno's death-defying deed will take place twice daily, and will be a part of the regular performance.

In addition to the feat of "Wilno" there will be other innumerable thrills when the Hagenbeck-Wallace Circus comes to Pontiac on May 28. Prominent among the displays will be Clyde Beatty with over thirty fighting African lions and Bengal and Siberian tigers. This is the largest group ever subjugated by an American and represents the pinnacle of wild animal training. Another savage and ferocious number will be presented by Aage Christiansen, a famous European trainer.

Demands of the juvenile patrons have not been overlooked and dumb actors from ponyland, monkeyland, bearland and dogland will participate in many novelties. Such well known trainers as Roy Rush, Bob Norton, Austin King, Cheerful Gardner and Allen Hauser will present groups of horses, zebras, llamas, elephants, camels and other semi-domestic animals.

Size Of Seed Pieces Affects Potato Yield

The planting of small-sized seed potato pieces decreases the size of the crop and increases the number of tubers which are affected with hollow heart, according to data obtained in two years of experiments conducted by the farm crops department of Michigan State College.

The sizes of pieces used were one half ounce, one ounce, one and one-half ounce, and two ounce. The average yields in bushels per acre obtained for the two years were, with one-half ounce pieces, 91.4, with one ounce 108.7, with one and one-half ounce, 123.4, and with two ounce, 129.4.

No hollow heart was found in any of the potatoes grown in 1929, which was due to favorable weather conditions. In 1928, the crop grown from the half ounce pieces contained twice as many hollow potatoes as the crop grown from the one and one-half ounce potatoes.

The seed should be cut in thick pieces to avoid drying out in the soil after it is planted. Approximately 15 bushels of seed cut to one and one-half ounce size will be needed to plant one acre.

(Political Announcement)

S. Lee Pack Announces Sheriff Candidacy

S. Lee Pack, veteran law enforcement officer and a resident of Oakland County for 23 years, today formally announced his candidacy for the Republican nomination for sheriff at the fall primary.

Pack, a native of Shiawassee County, entered law enforcement work in Oakland County in 1922 under James Butler, then sheriff. He continued as a deputy sheriff until early in 1929 when he resigned.

Soon after entering the sheriff's office, Pack tackled the perplexing problems then arising in connection with enforcement of the prohibition laws, relatively new at that time. By study of the legal technicalities involved, aggressiveness, and unswerving honesty, he made a record for arrests and convictions which won the praise of courts and prosecuting officers.

Most of his work along these lines was performed in addition to his usual duties which ranged through the whole scale of police work. His restless energy, obvious sincerity, and outspoken belief that the duty of an officer is to enforce all laws justly and impartially have won him the support of thousands of citizens throughout the county.

He was married in 1900 and has one child. He is now making his home at 319 Waverly avenue, Royal Oak, after having lived in Pontiac during his years as an officer. He is an active member of the Royal Oak Congregational Church.

'Thrips' May Damage State Fruit Crops

An insect, the flower thrips, which is not usually present in Michigan in sufficient numbers to cause damage to fruits or crops is reported to be abundant this year that the entomology department at Michigan State College advises the use of control measures to prevent injuries to fruit.

Damage to fruit can be prevented by the use of nicotine, either as a spray or as a dust. The nicotine can be applied as a

special spray or can be included in the regular early sprays. Peaches should be sprayed as soon as the shucks fall, and raspberries should receive the spray before the plants blossom.

Detailed directions for the proper mixing of sprays for the control of thrips can be obtained from the entomology department at the College or from County agricultural agents.
