**EXPERT BLACKSMITHING** & horse shoeing done by Math Hansen at his shop on Grace st. or at your home. Phone 380. 38-2-p

### Backbone of a Camel

The backbone of the single-humped camel is not curved upward in the middle, as many people suppose. It is as straight as the backbone of a horse or elephant. Humps on all camels are composed chiefly of fat and they vary in size according to the physical condition of the animals. When they are worked hard and poorly fed their humps shrivel up and become flaccid. Much of the ability of camels to travel long distances over the desert without food and water is due to this extra fat in their humps. The surplus fat is resorbed by the body when the animal does not get sufficient food and water. Thus the hump serves as a sort of commissary department from which the animal receives sustenance in time of famine. In certain breeds of sheep extra fat is stored in the tail.—Pathfinder Magazine.

### Early Puritan Picnic

Perhaps the gentle reader would be interested in knowing how the Puritan chieftains of the Massachusetts Bay colonists spent his first day in New England.

After exchange of greetings with Governor Endicott of the Salem colonists, Governor Winthrop says:

"We . . . returned with them to Nathameak, where we supped with a good venison patty and good beer, and at night we returned to our ship."

"In the meantime most of our people went on shore upon the land of Cape Ann, which lay very near us, and gathered store of fine strawberries."—Boston Post.

### Black and Blue Spots

Those black and blue spots we sometimes find on various parts of the body are bruises. They are the most common of all injuries. Sometimes we find them and wonder how we got them. Bruises result when we receive a fall or are struck by a blunt instrument that doesn't break the skin. If the injury is slight no treatment is necessary, but cold compresses will help. In severe bruises apply the cold compresses, elevate the injured part to diminish the pain, then apply witch-hazel or some other soothing lotion. Be sure it is only a bruise and that no bones are broken.—Exchange.

### Inexperience

George, a wee citizen of the North side, had committed a forbidden act and was being reprimanded by his father.

"George, I told you I'd spank you if you did that, didn't I?" asked his father.

"Yes," George replied, a little forlornly.

"Well, what shall I do with you?" asked his father, exasperated.

"How do you think I know?" came the reply, "I've never been a father."—Indianapolis News.

### Continued Next Month

Author—This is the plot of my story. A midnight scene. Two burglars creep stealthily toward the house. They scale a wall and force open a window. As they enter the room, the clock strikes one.

Sweet Thing (breathlessly)—Which one?—Union Pacific Magazine.

Every cloud has a silver lining, but some observers see only cloud while others see only lining—few see both.

A broken friendship and a split pearl cannot be mended.—Hindoo proverb.

### Stone That Floats

There is no other instance in nature of the fusing of quartz in the absence of a flux, except by the action of lightning striking sand or a mountain top. Science has named this product fulgurite glass. At the crater there are many wonderful specimens of sandstone seemingly so fused. In some cases the quartz is fused into lumps of opalescent material, but more frequently the sandstone has been puffed up and distorted, owing to the steam produced by the water which was in the stone at the time the outer and very highly heated part of the advancing incandescent mass was in close contact with the rock. Innumerable water-tight cavities, as in pumice, were formed by the steam, so that large and small masses of this peculiar and most interesting sandstone will float like a cork.

### No Record of Wren's Work

To prove that there are any apires on American churches designed by Sir Christopher Wren. Certainly he did not visit this country. Sir Christopher Wren was born in 1632 and died in 1723. Between the years 1670 and 1711 he designed 53 London churches. There are comparatively few churches in this country that were built prior to 1723. Among the early churches of meeting houses, grouped in the manner of Sir Christopher Wren, are Christ church, Philadelphia (A. D. 1727); St. Paul, New York (A. D. 1733); St. Paul, Charleston (A. D. 1767); and St. Michael, Charleston (A. D. 1752), of which the probable architect was Gibbs, the designer of the Radcliffe library, Oxford.

### Famous Colonial Hall

The trees on the front terrace of Carvel hall, at Annapolis, Md., are between 250 and 300 years old. They are allanthes trees, the Chinese "tree of Heaven." No one seems to know how they happened to be planted on the front terrace of Carvel hall. They were brought from China in a sailing ship considerably more than 200 years ago. The house in front of which they stand is the Prince George street entrance of Carvel Hall hotel. It was built in 1764 by William Paca, one of the signers of the Declaration of Independence and the third governor of Maryland.

### After the Unattainable

"He's on a hunt for blue roses"—to say this of anybody is to indicate that the person referred to is on a quest for unattainable objects.

This is a rather colorful expression which comes down to us from the days when there was no such thing as a blue rose.

As a matter of fact, this was the case until quite recently. For it was only a few years ago that the climbing rose called "Violetblue"—violet blue—as introduced by the Germans. Until the advent of this species of rose, the flower was cultivated only in the common varieties.—Kansas City Times.

## Smooth Riding Ease and Restful Comfort Make THE NEW FORD A Fine Car For Women To Drive

Only by driving the new Ford can you fully appreciate the easy-riding comfort that is such an outstanding feature of this great new car.

One reason, of course, is the use of four Houdaille hydraulic shock absorbers, formerly furnished as standard equipment on only the most expensive automobiles. Yet even Houdaille shock absorbers of themselves do not account for the complete riding comfort of the new Ford.

Equally important are the design and construction of the new transverse springs, the low center of gravity, and what engineers speak of as the low ratio of unsprung weight to the sprung weight of the car.

All of these factors combine to soften or eliminate the force of road shock and to make the new Ford an exceptionally comfortable and easy-riding car at all speeds.

You are feeling a mental comfort, too, in driving the new Ford because of its sturdy frame and body, mechanical reliability, the safety of its fully enclosed six-brake system and Triplex shatter-proof glass windshield. This freedom from mechanical trouble—this security—means a great deal to every woman who drives a car.

Prove this for yourself by calling or telephoning for a demonstration. We will gladly bring the new Ford to your home so that you may know, from your own experience, the many features that make it such a good car to own and drive.
