CARD OF THANKS
I wish to thank the neighbors, friends, Mrs. Harvey Blough, chairman of the flower committee, to Ladies who helped me during the funeral, also to John Daley and Dr. Thomas who were so kind to me during my sorrow and allow to all people who were how and furnishing ears and the sound of the

TOM CONWAY.

## An Alarm Clock

Is a nice thing to have around the house, mornings. But you can't carry an alarm clock around all day with you. To insure accurate time at all times, let a SWISS Watchmaker do your watch repairing.

—FINE— WATCH REPAIRING Guaranteed Mainspring, \$1
Thorough Cleaning, \$1
Stem and Crown, 60c each.

UNTIL WE LEARNED BETTER

Until we learned better, we used to mix wood and steel in our car hodies and wheels.

It was the best way to make bodies—then. But the state of the art

has advanced.

Of course, it is more expensive to make an all-steel body than to make a wooden frame and nail steel panels on to it. The better way inmake a wooden frame and nail steel panels on to it. The better way involves an initial expenditure of several millions of dollars for new dies,
which renders a change very costly. Cars, especially large expensive cars
which are produced in small volume, cannot afford this, because the dies
cost as much for one car as for a million. That alone explains why allsteel bodies are not used in all cars.

But our basic policy from the beginning is to make a good car better,
regardless of cost.

regardless of cost.

For example, when we discarded wood-steel body construction, it was For example, when we discarded wood some thousands of acres of the not because we lacked wood. We still have some thousands of acres of the not because would urge us to use up the wood best hard wood in the property of the proper

first, and then adopt the better all-steel body. But we decided that quality was more important than expense.

We weighed the reasons, for and against, before we made the change.

We could see only one reason for retaining a mixed wood-and-steel body we could see only one reason for retaining an all-steel body into a mailing the metal on, instead of welding an all-steel body into a strong one-piece whole. That reason was, it would be cheaper-for us.

Strong one-piece whole. That reason was, it would be cheaper-for us.

Our reasons for adopting an all-steel body were these: A wood-steel our reasons for adopting an all-steel body were these. It would be cheaper-for us.

Our reasons for adopting an all-steel body were these. It would be cheaper-for us.

A car way the decided of this. Rain seeps in between joints and the wood decays. gives evidence of this. Rain seeps in between joints and the wood decays. A car may have a metal surface, and yet not be of steel construction. A car may have a metal surface, and yet not be of steel construction. However, and yet not be of steel construction when the properties of the construction was the steel body remains intact—dented perhaps, but not crushed.

naps, but not crushed.

Steel does not need wood for strength or protection. Wood is fine for furniture, but not for the high speed vehicles of 1933.

In the Ford body there are no joints to squeak, no seams to crack haps, but not crushed.

or leak.

The all-steel body is more expensive—to us, but not to you.

By all odds, then, steel bodies seem preferable.

Wheels also have become all-steel. No one argues that an electrically welded one-piece steel wheel, such as the Ford wheel, needs to be "strengthened" by adding wood to it.

The one-piece all-steel body is the strongest, safest, quietest, most durable body made. That is our only reason for making them.

August 7th, 1933

Henry Ford

# RETAIN THE NATURAL BEAUTY of your Skin

WITH THIS MARVELOUS OLIVE OIL FACE POWDER

HAVE you looked at your complexion lately? Really looked at it?... Is it soft, smooth and clear? Or is it a little coarse, a little rough?
