Editor To Speak At Clarenceville Church

Dr. W. H. Phelps, Editor of the Michigan City Advocate, will speak next Sunday morning at 10:30 at Clarenceville Methodist Church. Sunday School at 11:30. S. Percy Morgan superintendent.

The First Quarterly Conference will be held next Friday night at 8:30 with potluck supper. Dr. Walter R. Fruit, district supt., will preside.

Remodelling Former Butterfield Residence

Extensive remodelling and redecorating is being done at the former Wells D. Butterfield home now owned by Fred W. Bagnall in Detroit.

New beams have been put in the living room and a recreation room has been put in the basement. Redecorating of the house will follow.

The work is being done by Arthur Lamb and Fred Becker.

SMALL BOYS BURN SHED

Fire set by small boys threatened a vacant house on N. Gage Avenue near Emmett in Southfield Community Monday afternoon. A shed adjoining the house was burned. Redford Township fire department put out the blaze.

Offer Inducements at Roadside Stands

Must Give Prices That Will Appeal to Buyers and Hold Business.

By M. C. Bond of the New York College of Agriculture-Whitely, N. Y.

Buyers usually patronize farmers' roadside markets to get strictly fresh and high quality produce and to save money as compared to retail prices in the city.

Many persons are willing to pay a premium for quality; but the policy of most successful roadside market promoters is to sell produce of equal freshness and quality, slightly below the retail price. Consumers can thus afford to drive out to the market where prices are maintained on that basis.

Quality, and freshness, and an honest pack give customers the greatest incentive to return to a market; and it is the repeat customer who makes a market profitable.

The numbers of visible customers who pass the stand also affect the amount of business, and should indicate how much money might be invested in a market. A study of one hundred New York state roadside markets showed that fifteen stands were on highways where the passing traffic did not exceed 1,500 vehicles for one day. These stands had, on the average, annual sales of about \$1,000. Twenty-two stands, where 2,000 to 3,000 vehicles passed in a day, did an annual business of \$2,700 a year, and the stands where 5,000 vehicles passed a day sold about \$4,000 worth of produce a year.

Good signs help to sell produce. A few words in bold letters, large enough to be read at least 100 feet, are essential to a good sign. A motorist who travels 35 miles an hour has but two seconds to read such a sign and to decide whether to stop.

Find Mold High in Fat

A mold which contains from 20 to 45 per cent fat has been discovered by chemists of the United States Department of Agriculture. The composition of the fat is unknown; but if it has properties which ordinary fats do not have, it may have specialized uses. The discovery was made in a routine study of molds by department chemists. A certain percentage of fat in a mold is uncommon, they say, but such a high percentage as was found in this particular mold, known as *Penicillium javanicum*, is unusual. The chemists surveyed approximately 75 molds and found nine which contained more than 15 per cent of fatty material. The mold producing the high percentage of fat was grown upon glucose. This mold grows larger and more rapidly than most of those studied. Important results of other mold studies by the department have been the development of methods of producing citric and gluconic acids.

Killing Bull Thistles

Common or bull thistles seem to be on the increase in some parts of the state, and a number of farmers report that pastures have been largely taken by this plant weed. They get so large that cattle and horses will not eat close to them. This type of thistle blooms in summer and early fall. It is most commonly found in pastures, along roadsides and in waste places, but often in cultivated fields. Spading or deep hoe cutting the autumn roots or second year flower stalks below the crown is advised. Salt applied to the crown or to the root stalk after the crown is cut off will kill the plant. Some use oil or gasoline in a can and squirt a little on the root after it is cut, and this causes the root to decay. Pastures should be moved before the plants bloom.—Ohio Farmer.

Light Weight, 3½ Lbs. Full Size, 1000 Watts

No bearing down, no heavy pushing and pulling. The extra heat does the work of extra weight. All you have to do is to guide the new Coleman Easy-Glide and it gives you beautiful work, quickly done. Heat automatic and adjustable. Saves up to 40% on current cost.

STURDY, ACCURATE, LONG-LASTING THERMOSTAT

DEPENDABLE, LONG-LIFE HEATING ELEMENT

Graceful in design. Finished in super chromium plate.

THIS NEW TIRE SAVES LIVES!

MOTORISTS, IT'S THE ONLY TIRE IN THE WORLD THAT OFFERS THE LIFE-SAVING PROTECTION OF THE GOLDEN PLY.

Yet it costs not a penny more than any other standard tire. The new Goodrich Silvertown with the Life-Saver Golden Ply protects you from blow-outs... makes you 3 TIMES safer at today's high speeds. The amazing Goodrich Ply resists terrific heat that causes blow-outs. Rubber and fabric don't separate. Thus dangerous blisters don't form.

YOUR LIFE might depend on this extra protection some day. Take advantage of today's still low prices, and enjoy a new feeling of safety when driving.
