**Almost  
Unbelievable**

It's almost unbelievable how much dust and dirt can find its way inside a tight-fitting watch-case in a year. It's astonishing—and also very harmful to your watch if the accumulation isn't removed.

If you haven't had your watch cleaned and oiled in a year, don't take a chance on ruining it. Bring it to us at once for cleaning and regulating. Moderate charges.

Niagara Not to Quit

Science has discovered that Niagara falls will last until the year 23,053. The giant cataract started to spill over a rock cliff 30,000 years ago and has only eaten its way through seven miles of solid rock in that time, says Faith-Adler Magazine. Few of the more than 2,000,000 visitors to the falls each year realize that concealed behind the majestic and beautiful sight of millions of tons of water plunging 160 feet into a swirling gorge is a romance of industry. Through a treaty between the United States and Canada Niagara supplies warmth, light and power within a radius of more than 200 miles.
