## MANY NEWSPAPERS ARE NOW REPRESENTED IN CAPITAL

Washington is now recognized as the world's center of important events, and, naturally, the city has more newspaper men in it than ever before. The classified section of the current telephone directory for Washington lists 242 newspapers, press associations and news photo services.

From the very beginning of telephone communication, newspapers recognized the value of this service in news gathering and dissemination, and a one-page telephone directory issued in Washington in 1879, the year after the telephone was introduced in the city, carried the listings of the Associated Press, Chicago Tribune, New York Herald, New York Tribune, New York Times, New York Sun, Philadelphia Enquirer, Washington Post, and Washington Evening Star.

Athens' First Written Laws

The Draconian Code in the Seventh century, B. C., was Athens' first written code. As nearly every violation of these laws was a capital offense, De-mades, the orator, said that "Dracon's code was written in blood."

## Great Eucalyptus Trees

of Australia Tallest

We are accustomed to talk of the great redwood trees of California, or their sisters, the massive sequoia, as the tallest trees in the world. But the great eucalyptus trees of Australia are much taller, attaining at times a height of 475 feet, according to a writer in Tit-Bits Magazine. The eucalypti, however, are of comparatively small diameter, ranging from 10 to 15 feet. The smooth and redwood trees in certain localities grow to 400 and 350 feet respectively but are of much greater diameter.

There are 300 species of eucalyptus, tallest of which are the E. Regnata and the Amygdalina. They are indigenous to Australia, except a few species that are natives of the East Indies and the Malay peninsula. The eucalypti are valued for the gum which in their trunks, the volatile oil in the leaves, the tannin in the bark, the fiber in the inner bark and, above all, for their timber. The oil is stimulating and antiseptic, and is used for affections of the nose and bronchial tubes. Eucalyptus trees have been planted with the belief in their beneficial effects against malaria. This may be because in swampy ground they help to dry the land and prevent the mosquito's growth.

They have been transplanted to many British possessions, and also to California. A common species, the blue gum, is known for its ability to withstand a long drought.
