Hardening of Cement
The hardening of cement is due
chefly to the decomposition of the
compounds of time upon the addition of water, resulting in the formation of calcium hydrate, which on
crystallization binds together the
other solld ingredients. The initias
setting is due principally to the
decomposition of the aluminates
while the dual hardening depends
more upon the action of the silicates.

Kehl-neer Diamond
The famous Kohl-noor diamond
may be worn by a queen but never
by a king. According to a superstition, any king who wears the jewel
will lose the rule of India, just as
past male owners of the Kohl-noor
leat their dominion over that realm.
In accordance with this belief, only
queen Victoria, Queen Alexandra,
Queen Mary and Queen Zitzabeth
have ever used the stone, which
weighs 106 carats.
