

### MEAL VARIETY WELCOMED BY FAMILY IN SPRING

Most families welcome new hot dishes that will tempt at the end of winter the faded, end-of-the-winter appetites. And members of the home economics staff at Michigan State College have some ideas for meals which will bring a touch of spring to either the noon or evening meal.

Eggs are down in price now, so it's an especially good time to plan meals around them. Cheese is another favorite that will bring variety into meals at low cost. Fish suggests many unusual dishes, and both fresh and canned fish is available—thanks to quick freezing and rapid transportation. Nuts, too, offer a pleasant surprise when they appear in the main dish for dinner or supper. This season, peanuts, walnuts and pecans are especially abundant.

Four suggestions from the federal bureau of home economics indicate different types of main dishes that will make use of these foods. A fluffy, golden-brown soufflé is hard to surpass. Or, if you're in a hurry, omelets offer another excellent way to use eggs. Cheese, flaked fish, vegetable pulp, or ground meat can be added to either the soufflé or the omelet to make them worthy of their ranking as main dishes.

Croquettes are especially suitable for hot lunch or supper dish, and they're just as good for dinner. Make the croquettes with chopped nuts, flaked fish, eggs, or cheese—and the usual "blender" of thick sauce and "filler" of mashed potatoes or cooked cereal. Or, if you'd rather not bother with deep-fat frying, you can use fish or nuts in a baked loaf.

As a finishing touch, for croquettes and loaves, serve them with a well-seasoned sauce. Depending on the main ingredient of the loaf or croquette, you may choose an egg sauce, tomato sauce or plain white sauce.

most important.

On black varieties, anthracnose causes scab or cane-spot and the name "gray-bark" describes the symptoms found on the rebs. The losses on the black raspberries and dewberries result from actual damage to the canes resulting in premature ripening and withering of the berries. On red varieties the disease is serious on the fruit stems, leaves, calyx and the fruit. The red varieties Latham and King and all black varieties are seriously attacked.

The anthracnose fungus lives overwinter in the spots on the old canes. The fungus produces spores very early in the spring and these spores are carried to young shoots and fruitful laterals by rains. Infection is heaviest during early spring when the buds are unfolding and growth is tender.

The delayed dormant spray of strong lime-sulphur safely burns out the fungus overwintering in the old canes, says Cuthbert. Use from 10 to 11 gallons of commercial liquid lime-sulphur to each 100 gallons of water when the buds are just showing green. This spray

also prevents much leaf-spot and kills many red mites.

A second spray of weaker material, Bordeaux 46-100, should be applied one week before blooming. This prevents infections on the young panes and laterals. Further summer sprays are not advised as raspberry foliage is very susceptible to spray injury.

I have ever deemed it more honorable and more profitable, too, to set a good example than to follow a bad one.—Thomas Jefferson.

### BERRIES SHOULD BE SPRAYED TO KILL FUNGI

Whether the planting is for commercial marketing or for home use, two simple sprays can reduce possible damage from the anthracnose fungus which plagues red and black raspberries.

Anthracnose generally is present on raspberries but the disease can be controlled by sprays, it is explained by Donald Catton, fruit pathologist at Michigan State College. The delayed dormant spray applied while the leaves are just showing green in the buds is the

### M. S. E. S. ESTABLISHES J. R. SERVICE

The above picture shows youth in one of the 54 offices of the Michigan State Employment Service where counseling and placement services are offered youth in the state. In addition there are 30 itinerant offices to provide services for rural youth and sparsely populated areas. Skilled counselors, carefully selected from the regular staff of employment technicians, give specialized attention to the employment problems of young people 16 to 25 years of age. Michigan is the only state in the country where such a state-wide service has been developed to date. All youth employed by the National Youth Administration are now certified through these offices. In addition, the number of youth placed in private employment through the Placement Service has been considerably increased.

## 'Mother Knows Best' Doesn't She?

Guiding their inquiring minds and dynamic activities . . . choosing their food, clothes, entertainment and health needs . . . the well-informed modern mother knows what is best for the welfare of her offspring. And it is safe to say that an incalculable share of her accurate information has had its beginning in the advertising columns of this newspaper.

Many of the advertisements today bristle with ideas. They are more than catalogs. In the true sense, they are education! Scientific minds contribute to their contents. Their recommendations are based on deep thought. Their words are carefully chosen; their diction studiously formed for clarity and understanding.

Through advertisements the mother of today learns authoritatively about new methods in the care of children's teeth. About antiseptics and hygienics. About body-building and health-giving foods. About new comforts as well as new styles, in juvenile wearing apparel. About books and schools and vacation camps. . . . The advertisements pour innumerable hints and suggestions into her store of knowledge! They make her a more capable manager of the home and guardian of the family exchequer.

"Mother knows best"—is this expression heard about your home? Is it just an admonition? Or, is it founded on facts. Reading advertisements will to help make it so.
