

LOSEY CORNERS

The Boy Scout troop 282 sponsored by Hope Chapel, gave a demonstration of their work at the parents' night last Friday evening. About 50 parents enjoyed the work out and later the refreshments furnished by the scouts. Plans for forming a cub pack are being taken up and mothers who are interested in having their boys from 9 to 12 join this group are invited to consult Charles Thomas, scout leader.

Sea Scout Skipper Dixon and Mate Wesley Goodfellow with Mrs. Dixon and Mrs. Goodfellow and daughter Esther, attended the annual spring ball held in Elks Hall in Pontiac, Friday evening, April 19. Mr. Dixon and Mr. Goodfellow were in full uniform and consequently were allowed to take part in the boarding ceremony of the "Pelaris" scout ship. The ball was filled and every one enjoyed the very fine music.

Mrs. D. V. Mitchell of Maplewood entertained Mrs. Albert Spitzer and daughter Mary of Claris, also Mrs. Arthur Howe and daughter Virginia of Detroit at luncheon Friday, April 19.

Mrs. C. Noon of Middlebelt entertained at lunch Mrs. Cameron of Grosse Pointe, last Thursday. Mrs. R. Remey was badly frightened one evening last week upon hearing her dog bark. She looked out the window to see someone peeking in the window of the house next door. Mrs. Remey had the presence of mind to let her dog out, who chased the intruder across the fields. Mrs. Remey, who works until late, came home whooping after the excitement and stated that if he catches any prowlers in his yard he will shoot first and ask questions after. Mrs. Remey is taking target practice.

Mr. Charles Lutz and Mrs. Walter Dixon shared birthday honors Sunday at the home of Mr. and Mrs. Lutz of Ann Arbor. A very fine dinner was prepared by Mrs. Lutz and her three daughters, Jeanette, Carlin and Shirley, complete with a large birthday cake. Among those other than friends of the family in Ann Arbor were Mr. Omar Lutz and wife of Farmington and Mrs. Ruth Baker of Detroit. Gifts and flowers with the good wishes of their friends made it a very enjoyable occasion.

Mr. and Mrs. Henry Miner of Detroit were Sunday dinner guests of Mr. and Mrs. Robert Fredericks of Maplewood.

Mrs. Robert Fredericks is proudly exhibiting a box of flowers sent to her from Florida by her daughter, Mrs. Edwin K. Tamm. The flowers arrived in good condition packed in Florida moss.

Mrs. Mary Goodfellow spent Thursday in Pontiac on a shopping trip. Mrs. Helen Dixon was with her.

SPRING

Spring with pale, yellow sunshine and the sound of a baby's curls and the path of a garden anemone is her fair unfurling.

Daughter's waist with raindrops and as the sun shines through walls in the woods in April, if your youth you would renew.

Comes and strength await you as the earth once more awakes. Burdens and fears will leave you, and you laugh at past mistakes. Forgotten how cold the winter and days that seemed dreary or long.

All that is sad forgotten, in the joy of a robin's song.

Mrs. Robert Fredericks

BOOKLET SHOWS MERITS OF VITAMIN D MILK

An interesting and informative pamphlet dealing with the merits and vital facts that every mother should know about Vitamin D milk, is available on request at the Farmington Dairy.

The booklet, which is given away free, tells all about this so-called "Sunshine Vitamin" and explains in clear, concise language, just why Vitamin D milk is needed by youngsters and their elders.

Seven reasons are set forth as follows in it, detailing why this milk should be a part of the daily diet. They are:

1.—Helps Prevent Rickets. Vitamin D milk tends to ward off that disease of the bones and teeth known as Rickets which sometimes afflicts children and results in bowed legs, flat feet, imperfect chest development, and other physical deformities.

2.—Promotes Sound Teeth. Childhood is the time to implant sound teeth for later life. Vitamin D milk helps do it.

3.—Builds Strong Bones. The growing youngster needs Vitamin D to help the body assimilate the calcium and phosphorus in milk so that the body framework will grow up strong and straight.

4.—Erects Nerves. Need it. Vitamin D milk gives them the nutrients they need in usable form (calcium and phosphorus) for protection during this trying period.

5.—Nursing Mothers Need It. Also. Nature tends to rob the bones and teeth of the mother of these minerals, to provide them to her baby. Therefore, an added dietary source of supply is necessary.

There is an old adage to the effect that every child costs its mother a tooth which need not be true with Vitamin D milk.

6.—Adults Need It Too. Vitamin D milk all during life contributes important advantages to the diet and to physical well-being.

7.—Science has long recognized the need for an inexpensive source of Vitamin D in the daily diet. Few foods contain it. Our Vitamin D milk now provides it. Vitamin D helps make useable the calcium and phosphorus which milk so abundantly supplies.

AT THE REDFORD THEATER

"Brother Rat and a Baby," the comedy successor to last year's comedy success, "Brother Rat," will be the next attraction at the Redford theater, starting on Friday. Written by the same author, as the delightful original stage and screen play, John Minks, Jr. and Fred F. Finkbeiner, the film continues the adventures of a group of Virginia Military Institute cadets after their graduation.

In following up last season's comedy hit, Warner Bros. has combined calendar fact with fiction by making the period between the two stories coincide with the time lapse between the pictures.

"Brother Rat" was filmed just a year ago. In the follow-up production, the same players are picked up the lives of the same movie characters after a lapse of just one year.

SOWING BROME GRASS IS TRICKY PROBLEM

Now that Michigan farmers are accepting the idea of mixing smooth brome grass and alfalfa for an ideal pasture growth, these same farmers are finding new knowledge how to get the two types of seed sown.

Studies by C. M. Harrison, pasture specialist at Michigan State College indicate some of the problems and what is known of their solution.

Seedlings of about eight pounds of alfalfa seed to an acre are customary. Farmers usually plan on spring or summer seedlings. Brome grass can be sown at a five to seven pound rate with fall seeded alfalfa, but that means sowing separately from the alfalfa. After fall sowing, the alfalfa can go in the following spring.

Experience indicates best preparation for both seedlings is to have a firm, clean seedbed, fertilized and limed as required for alfalfa. The next logical step is to figure out how and when to seed the brome grass. An even distribution is difficult because the seeds are light, flat and wing tipped, weighing only 14 pounds to the bushel. One method and probably the easiest is to mix with oats for better distribution, remembering not to cover the brome too deeply in drilling, and watching the drill box to keep the brome evenly mixed as it feeds out.

The smooth brome is slow to start. In the first year the mixture in the pasture probably will not be more than one-fourth brome, says Harrison. In the second year this likely will increase to 50 per cent and later as the alfalfa dies out the brome grass should fill in the vacant spots normally taken over by June grass or annual weeds.

U. S. HAS NEARLY HALF OF WORLD'S TELEPHONES

There are sixteen times as many people outside of the United States as within it, yet this country has nearly one-half of the world's total of 42,000,247 telephones. Outside the United States, on the average, only every 100th person has a telephone; while within the United States there is one telephone for every six people—15.4 telephones for every 100 of the population.

There is more telephone wire in the United States than in all the rest of the world—nearly 4,000 feet of wire for each man, woman and child, compared with only slightly over 200 feet of telephone wire per capita in the remainder of the world.

In the United States, the average per capita use of the telephone amounts to 223 calls per year; elsewhere it is only about 16 calls. At present, more than 1,000 telephone calls are completed in this country per second, or more than 91,000,000 calls per day.

These data, and many similar figures, are included in a compila-

tion entitled "Telephone and Telegraph Statistics of the World, January 1st, 1939," just issued by the American Telephone & Telegraph Company, presenting the results of the latest annual survey of world telephone and telegraph facilities. The data were obtained from telephone and telegraph administrations throughout the world.

At the beginning of 1939, the latest date for which it has been possible to gather world-wide comprehensive authentic information, the number of telephones in the world (42,000,247) were connected to 174,548,000 miles of wire, corresponding to 1.91 telephones and 8.11 miles of telephone wire for every 100 of the world's population of slightly more than two billion people. The United States alone accounted for approximately one-half of these facilities, or 19,953,263 telephones and 92,850,000 miles of telephone wire. Europe, with 4.5 times as many people as this country, had only 15,205,450 telephones and 59,333,000 miles of telephone wire, corresponding roughly to one-third of the world totals.

During 1938, the world's telephones and wire mileage increased by 1,457,273 telephones and nearly 5,000,000 miles, respectively.

Over one-half of the world's telephones are automatically operated, including more than 9,000,000 "toll" telephones in this country. About two-fifths of the world's telephones are operated by gov-

ernmental agencies, while three-fifths are operated by private companies, the largest private system being in the United States. The largest privately owned and operated telephone system is that of Germany, which had only 4,146,489 telephones, or roughly one-fifth of the number in the United States. The total number of telephones in the five largest countries mainly served by privately owned and operated systems (United States, Canada, Italy, Denmark and Argentina) corresponds to 11.35 telephones for each 100 of their combined population, or four times the combined telephone development of 2.81 telephones per 100 population of the five largest countries (Germany, Great Britain, France, Japan and Russia) whose telephone systems are operated by their respective governments.

COLLECTORS TAKE TO METER STAMPS ON PHONE COVERS

The American Stamp Journal reports that slogans printed by post-metering "machines" on envelopes in which telephone bills are mailed are becoming very popular with collectors. These telephone slogans have a variety that is pleasing to the collector, who also is aided by the fact that they come on small covers. Some collectors are making up a specialized collection of the telephone meter slogans.
