7 TO 14 DEGREES COOLER

Users say: "It's like sleeping outdoors!"

This is NOT the best house-cololing method in the world, but it's nighty good—as hundreds of softsfied users will fell you. Aftic fan house-cooling has the virtue of being simple and inexpensive ... and it schieves surprisingly effective resulft. Even when there is not a breath of air stirring outside, you can often cool your house 7 to 14 degrees in the evening, making your bedrooms comfortable for sleeping. This is NOT the best house

Here is the way it works: During the day, the last sun beating down on the roof converts your actic into a huge event with temperatures often reaching 130 degrees. Much of this heat is transferred through the ceilings to the rooms below, and at night, this burden of hot air hoags in the, house, even after the temperature outdoors has follen considerably.

An attic fan changes all his. After sundown, open your windows and flip the switch of the fan. Instantly Its large, powerful, blades blow away the oppressive blanket of heat in the attic and set up a gentle circulation of air all through your house. A flood of coal night air is daym in through the open windows, making your rooms delightfully comfortable. An attic fan casts only about ½c on hour to operate. Prices range from \$50 up (installation extro).

Electrical dealers, department stores, and fan dealers will gladly give you full information about this low-cost method of house cooling. Telephone today. The Detroit Edison Company, or install this equipment.)

VACATION COSTS should include the small charge of 25c \$100 worth of
