Don't keep a "snow-man" in your refrigerator—

IT COSTS YOU MONEY!

Warm weather means an added burden on your refrigerator. The hotter the weather, the harder it works to keep things cool. If you notice a "snow-man" forming inside—heavy frost on the cooling coils—it's time to get busy and defrost the refrigerator. That layer of frost is costing you money. It means that the refrigerator must work overtime to absorb heat through a blanket of frost around the cooling coils. And for economical operation, the motor should run as little as possible.

It's only human to keep "putting-off" the chore of defrosting—especially in summer, when ice cubes are in big demand and you hesitate to have your refrigerator out of commission even for a few hours. But see that it is done regularly. Do not use an ice pick or a sharp instrument to remove ice; this sometimes punctures the refrigerating coils. After defrosting, wash the whole interior (coils, shelves, trays, etc.) with lukewarm water and mild soap. Unless the motor of your refrigerator is hermetically sealed, have it oiled and inspected periodically. Remember that your refrigerator must last for the duration. Treat it accordingly!
