

Succulent Feed
Good silage made either from corn or grass is an excellent feed but not essential. The nutrients in its dry matter and not its water content are what make milk. The milking cow must take in a lot of water but if she has access to it from water bowls or other frequent and ample water supply, a succulent feed is not required.

Browning Qualities
Soybean flour gives a very pleasant flavor to pastry and increases its browning qualities desirably. It is especially popular for prune pie or tarts. The soybean flour can be used in proportions of 12 to 15 per cent which, when translated into home-kitchen terms, means a substitution of 2 tablespoons of the soybean flour for 2 tablespoons of white flour in each cup of flour used.

Map Garden
The gardener who makes a plan of the garden on paper in the winter, is ready to make fast work of the actual planning when the ground is ready for seed to be sown. The plan may be a detailed map of the garden drawn to scale, or it may be merely a list of the crops that are to be grown, the number of feet in rows of each one, and the probable planting date for each.

Mortgage Financing
In 1943 American life insurance companies put approximately \$400,000,000 into mortgages on city homes, including apartments, bringing total financing aid of this type to nearly \$4,000,000,000, an all-time peak, it was reported by the Institute of Life Insurance. This aggregate represents housing for approximately 3,500,000 persons.

An Economical Way To Shop

Without Using Tires or Gas!

It means a lot these days to be able to shop in your own home—and thus save your tires and gasoline. Give me a call and I'll be glad to come to your home and demonstrate Spencer Individually Designed Supports.

Suggestions Aid Peak Operation of Tractors

To help save fuel and maintain peak tractor operation, the spark plugs and ignition should be carefully checked, being sure that they are correct for the engine and the fuel to be burned. Also, carburetors, manifolds, governors and chokes should be set for the given fuel. In making adjustments, shut off the motor because an idling tractor consumes large amounts of fuel. Correct lubrication reduces friction to a minimum and saves on power and fuel. Overheating the engine results in loss of efficiency and also a large loss of fuel. Correctly inflated tires reduce draft and rolling resistance, and help to save on fuel. A poor hitch creates unnecessary draft and the pulling of dead weight. This calls for extra power and fuel. The brakes should be kept properly adjusted. A dragging brake is just so much dead weight, and a real fuel hog. Accelerate the tractor slowly and steadily. A throttle which is advanced too rapidly pours fuel through the engine faster than it can be turned into useful work. Fast speed-ups throw dangerous overloads on the moving parts of the tractor and the tools which it pulls.

Pork Production
Features are the foundation of profitable pork production. They are so important that in many cases they will determine the difference between profit and loss.
