You aren't getting machinery, Mr. Farmer, because...

PICKET LINES

have taken the place of

PRODUCTION LINES!

...so don't blame your Implement Dealer!

Your implement dealer had planned and expected to have his display floor filled with new implements and tractors weeks ago. And we had planned to make them—had told our dealers and our farmer customers they would have new equipment and plenty of service parts for the 1946 spring work. And we had hoped to sell these machines at an advance in price.

Real Production Had Started
When the war ended, our organization bent every effort to increase production, with the result that in the last months of 1945 machinery was being built in very substantial quantities. Here are a few figures:

ITEM	NOV. 1945	DEC. 1945
Tractors.....	7,271	7,432
Combines.....	2,345	2,526
Cultivators.....	3,482	3,308
Hay Loaders.....	209	982
Plows.....	6,185	6,702*

*Plows are made in our Canton and Channahon Works, which are not on strike. January production was 7,747 plows.

Both your dealer and we were encouraged by this production picture at the turn of the year. But the strike changed all that. As you know, the CIO United Farm Equipment & Metal Workers of America called a strike in ten of our plants, on January 21, 1946.

What Is The Strike About?
Wages are a basic issue. At the time of the strike, Harvester employees were among the highest paid workers in American industry. When the strike began, the average hourly

earnings in the ten plants, not including overtime, were \$1.15%. If present wage proposals are adopted, this figure will become \$1.33% per hour.

When the strike began, negotiations were broken off by the Union on the issue of compulsory union membership. The Company has no desire to weaken the Union. It recognizes certain reasonable needs of the Union. But the Company does oppose compulsory unionism. It feels strongly that an employee's membership should be a matter of his own choice.

Material Costs and Price Relief

Wages and materials are the great costs of opening our business—though they consume all but a few cents of every dollar the Company takes in. Wages are obviously going to be high—and nobody knows just how high material costs will go.

In the face of rising costs of materials, the Company does not see how it can pay the wage increases recommended by a Government fact finding board until it has definite and satisfactory assurance from the Government that reasonable price relief will be granted to the Company within a reasonable period of time. This matter is of such importance that it will not be discussed here, but will be covered by future advertisements devoted to both prices and profits.

Speaking for our dealers and ourselves, we can assure you that no customer is more eager than we are to resume production. We are doing and shall continue to do everything in our power to bring about a fair settlement as soon as possible.
